A NOTE TO USERS

Changes in this issue:

(1) The seasonally adjusted figures for owned inventories, shipments, new orders, unfilled orders and ratio of inventories to shipments on page S-6 have been revised from January 1958 on.

(2) The original and seasonally adjusted figures in Table 37 have been revised from January 1958 on. The first four series in Table 37 are the same as those in (1) above.

Back Records

(1) The entire back records for the revised series in (1) above, from 1952 on will be mailed out as the

first amended sheets to the second issue of the Annual Supplement to the Canadian Statistical Review.

(2) The following back records are available on request from the Current Business Indicators Section of the National Accounts and Balance of Payments Division:

- (a) The original and seasonally adjusted series from 1952 on for all the revised series in Table 37, but excluding those which will be in the amendment to the Annual Supplement.
- (b) The original and seasonally adjusted series from 1949 on for all series in Table 17 which are not included on page S-3.
- (c) The original and seasonally adjusted series from 1947 on for all series in Table 76.

Annual Subscription: \$5.00 — Single copies: 50c. each

Orders may be ordered from the Information Services Division, Dominion Bureau of Statistics, including a free annotated catalogue, and remittances made payable to the Receiver General of Canada.

NATIONAL ACCOUNTS—INCOME AND EXPENDITURE

FIRST QUARTER 1963

Introductory Review

Gross National Product remained at a high level in the first quarter of 1963; it is estimated at \$41.6 billion, seasonally adjusted at annual rates, compared with \$41.3 billion in the closing quarter of 1962. This increase of close to 1 per cent also reflects some higher prices, leaving only a fractional gain in the volume of the nation's production. But it should be noted that part of the estimated change between the quarters is purely statistical; it assumes a normal crop in contrast to the near record crop of 1962, which in itself involves a reduction from the fourth quarter of approximately \$200 million.¹ Non-farm Gross National Product is estimated to have risen about 1 per cent.

The main sources of strength in the economy came from consumer expenditure and government purchases of goods and services. Exceeding the rise in personal disposable income, personal spending advanced somewhat more than 1½ per cent, with purchases of durables remaining at the same high level as in the preceding quarter. The 2 per cent advance in government expenditure on goods and services reflects unchanged Federal government expenditure and a further advance at the provincial-municipal level. However, there was a further contraction in the first quarter in the deficit of all governments combined. Gross business capital formation failed to advance as a drop in housing construction offset some further improvement in outlays for plant and equipment combined. The deficit on external account widened as imports of goods and services rose more than exports, although changes in both receipts and payments were small. Investment in business inventories remained virtually unchanged from the fourth quarter of 1962 and had little impact on the change in production.

The salient developments on the income side were an unusually large advance in labour income and a substantially unchanged level of corporate profits. However, dividends paid to non-residents rose sharply, resulting in a drop in corporate profits as measured for National Income purposes, that is, after deducting dividends paid to non-residents.

Production and Employment

The volume of manufacturing output increased by 1 per cent in the first quarter of 1963 compared with the fourth quarter of 1962. This increase was almost entirely due to the substantial gain in output of non-durables. The 2 per cent increase in

non-durables during the first quarter alters a pattern of marginal increases exhibited during the latter half of 1962. It had much of its basis in 4 per cent increases in the output of both food and chemical products. Strength in the former group was broadly-based amongst its components, while in the latter it largely emanated from the acids, alkalies, salts and fertilizers industry, where a major and lengthy strike was settled during the quarter. Paper products fell by 1 per cent, reflecting lower newsprint shipments to strike-affected American newspapers. Gains of about 10 and 4 per cent respectively occurred in the output of rubber and tobacco products. Elsewhere amongst the non-durable manufacturing industry groups, gains and losses were mostly marginal.

The output of durable goods manufacturers was only slightly higher during the quarter, in contrast to the considerable but decreasing gains of the preceding three quarters. The rate of increase evident in 1962 in transportation equipment slowed down during the first quarter of 1963 when a gain of only 1 per cent was recorded. Iron and steel products also increased by 1 per cent, with substantial gains being made in the primary iron and steel and the iron castings industries. Non-ferrous metal product output was up by almost 2 per cent, led by a similar gain in smelting and refining. A small decline occurred in electrical apparatus and supplies while non-metallic mineral products were down by 5 per cent. The output of wood products remained unchanged.

Among other goods-producing industries related indicators suggest a substantial increase in forestry and a small gain in construction activity. Mining was virtually unchanged during the quarter, following a slight decline during the previous quarter. Increases in metal and non-metal mining were mostly offset by a decrease in the output of fuels. Within metal mining, movements were generally slight with the exception of higher iron ore output and a drop of 7 per cent in copper output.

Among the service-producing industries, related data suggest that gains occurred in transportation and trade.

The labour market continued to improve in the opening quarter of 1963. According to the Labour Force Survey employment in total was fractionally higher than in the closing quarter of 1962, when seasonal factors are taken into account, and employment in the non-farm sector was up more than employment as a whole. With little change in the total labour force and an increase in employment, seasonally adjusted unemployment declined from 5.9 per cent of the labour force in the fourth quarter of 1962 to 5.7 per cent in the first quarter of 1963.

¹ The estimates are based on acreage intentions and ten-year average yields. Seasonally adjusted quarterly data are obtained for the crop by dividing the annual crop estimate by four.

GROSS NATIONAL PRODUCT CONTINUED ITS ADVANCE BUT AT A SOMEWHAT SLOWER RATE THAN IN THE PREVIOUS QUARTER

GOVERNMENT EXPENDITURE ON GOODS AND SERVICES ROSE BY ABOUT 2 PERCENT IN THE FIRST QUARTER, WITH MOST OF THE INCREASE AT THE PROVINCIAL-MUNICIPAL LEVEL

THE DEFICIT ON CURRENT ACCOUNT ROSE APPRECIABLY FROM THE EXCEPTIONALLY LOW LEVEL IN THE FOURTH QUARTER, WITH MOST OF THE INCREASE DUE TO HIGHER PAYMENT FOR SERVICES

CORPORATION PROFITS REMAINED AT THE HIGH LEVEL REACHED IN THE PREVIOUS QUARTER

(IN ALL CHARTS DATA ARE SEASONALLY ADJUSTED AND AT ANNUAL RATES)

Statistics of employment by industry based on the survey of establishments having 15 or more employees provide additional data on the employment situation. Seasonally adjusted data for most major industries covered in the establishment survey indicate at least some gain in employment; mining is the only exception. Hours of work in manufacturing appear to have remained about the same.

The Components of Demand

The first quarter of 1963 marked a further expansion in consumer spending from the plateau recorded in the first and second quarters of the previous year, and yielded an increase that, at 1½ per cent, slightly exceeded the average rate of growth for the past five years. Since personal disposable income improved by slightly less than 1 per cent, consumers lowered their rate of personal savings somewhat to achieve these expenditures. With relatively stable prices, this increase in spending in large part represents gains in real consumption.

Durable goods showed no change from the previous quarter as purchases of new and used cars did not repeat the large increase recorded in the previous quarter and other durable goods showed mixed trends.

Among the non-durable goods, which showed a rate of increase coinciding with total personal expenditure, increases were recorded in food, auto parts and accessories, fuel including gas, and electricity, while clothing, gasoline, oils and grease recorded some decreases.

Expenditures on services, increasing by almost 2½ per cent, showed greater strength than they have for several years. Expenditures on personal services, purchased transportation, recreation, and shelter, rose. It may be noted that tourist expenditures by Canadians travelling abroad also increased after the slowdown which was apparent in this category in the two previous quarters. These increases were partially dampened, among other things, by a 2 per cent decline in user-operated transportation.

Spending on fixed capital in total showed no change in the first quarter of 1963, with the rise in non-residential construction being offset by declines in housing and in machinery and equipment; at a seasonally adjusted annual rate the level remained at \$7,052 million.

The value of new housing dropped by almost 2 per cent to a level of \$1,564 million. Although new housing starts were strong in the first quarter, rising by 7 per cent to an annual rate of 135,400 after seasonal adjustment, the level of completions, which fell 10 per cent to an annual rate of 118,900, tended to lower the value of work done.

Total business spending of \$5,488 million on plant and machinery rose fractionally from the fourth quarter. At a level of \$2,736 million the spending on non-residential building and engineering rose by over 3 per cent but this increase was partly offset by a decline of 2 per cent in investment in machinery and equipment on which outlays fell to \$2,752 million. Although business spending in the first quarter on fixed capital other than housing is almost 6½ per cent above the first quarter of 1961, the advance has been hesitant and the level achieved is still below that of the annual average level for 1957.

The first quarter estimates of total business gross fixed capital formation falls considerably short of the \$7,267 million anticipated expenditures for the full year and indicates some increases during the remainder of the year, particularly in non-residential construction and machinery and equipment, if the anticipated expenditures are to be attained.

With the exception of the third quarter additions to stocks in the hands of businessmen made little contribution to the level of economic activity during 1962. This situation persisted into the opening months of 1963. Investment in inventories in the first quarter of 1963 is estimated at \$152 million, seasonally adjusted at annual rates, almost the same as in the closing months of 1962. Most of the accumulation took place in trade, and in retail trade in particular; manufacturers drew down their stocks.

While changes in stocks in non-durable retail trades were mixed, the overall result was a considerable accumulation, a large part of which was in stocks of food. Most of the durable trades liquidated stocks, with the important exception of motor vehicle dealers, whose stock build-up made for accumulation in the durable trades as a group. The accumulation of stocks in retail trade in the first quarter raised the stocks-to-sales ratio.

Stocks were built up in wholesale trade in the first quarter of 1963, but on a much smaller scale than in the preceding quarter, thereby reducing the stocks-to-sales ratio.

Manufacturing industries shifted from accumulation in the fourth quarter of 1962 to liquidation in the first quarter of 1963. Liquidation was widespread in both durable and non-durable lines, and was apparent at all stages of production. The drawing down of stocks took place against a background of rising shipments and new orders. The stocks-to-sales ratio was somewhat reduced from the previous quarter.

A fractionally higher level of both imports and exports of merchandise, with increased payments and unchanged receipts from non-merchandise transactions, led to a larger import balance in the first quarter of the year after allowance for seasonal influences.

The deficit on current account transactions totalled \$552 million, as total exports of goods and services rose by approximately half a per cent to an annual rate of \$8,476 million and imports of goods and services rose by 2 per cent to an annual rate of \$9,028 million.

The export balance from merchandise trade remained virtually unchanged from the fourth quarter and at annual rates after allowance for seasonal factors was approximately \$400 million. Merchandise exports, adjusted for balance of payments and national accounts purposes, rose by just over half of one per cent to an annual rate of \$6,564 million, while merchandise imports rose in the first quarter by about three-quarters of one per cent to an annual rate of \$6,168 million.

The deficit arising from services and non-merchandise items rose in the first quarter to a seasonally adjusted annual rate of almost \$950 million from the unusually low annual rate of just over \$800 million in the preceding quarter. The impetus for this increase came mainly from increases in payments of interest and dividends, heavier expenditures by Canadians abroad and an increase in payments for miscellaneous services, which raised total payments to an annual rate of \$2,860 million, 5 per cent above the fourth quarter. Receipts from services were unchanged from the fourth quarter, at a seasonally adjusted annual rate of \$1,912 million and the changes which occurred within the components were small.

Government Sector

Expenditures on goods and services of all levels of government combined, at a seasonally adjusted rate of \$7,920 million in the first quarter, rose about 2 per cent from the fourth quarter of 1962, regaining the level reached in the second quarter of that year. The increase reflects primarily the steady growth in the spending of provincial and municipal governments; their participation in the vocational school construction programme initiated by the Federal governments has been a factor in this growth.

Federal expenditures on goods and services levelled out from the fourth to the first quarter, after declining steadily from the second quarter of last year. Defence expenditures dropped sharply, by 10 per cent, from the preceding quarter, but this decline was offset by a corresponding increase in non-defence outlays, the latter reflecting the retroactive payments for wage and salary increases, higher investment-type spending from the irregularly low fourth quarter and larger payments from the Colombo Plan Fund. Federal expenditures other than goods and services declined by almost 4 per cent. The largest portion of the drop was attributable to a decline in subsidies; the fourth quarter had reflected substantial interim payments to the railway systems.

Although personal and corporate income tax revenues rose appreciably, total revenues of the Federal government declined by 1 per cent because of the lower trading profits of government enterprises and smaller indirect tax revenues from excise taxes and customs duties, as some of the temporary surcharges on imports were removed. Total expenditures of the Federal government were also smaller with the result that the deficit of \$244 million in the fourth quarter was reduced in the first quarter to \$164 million, seasonally adjusted at annual rates.

The deficit of the provincial-municipal levels of government combined decreased, as increased revenues more than offset the rise in expenditures.

Income Flows

Labour income in the first quarter of 1963 is estimated at \$21.3 billion on a seasonally adjusted basis, somewhat more than 2.5 per cent higher than in the fourth quarter of 1962. Part of this increase reflects retroactive payments of wages and salaries to Federal government employees.

The recent quarterly increase in labour income is unusually large. Only two such increases have been recorded since the boom year 1956. Both occurred in 1959 and both reflected special factors such as retroactive payments and the conclusion of industrial disputes.

In the goods-producing industries the quarter-to-quarter increase was somewhat more than 2 per cent, compared with 3 per cent in the service-producing industries. The latter increase was heavily weighted by the retroactive payments, already referred to, while the quarter-to-quarter change in the goods-producing industries reflected relatively large increases in the primary industries and construction.

Corporation profits (before taxes and before dividends paid to non-residents) remained virtually unchanged from the fourth quarter of 1962, remaining at the record annual rate of \$4.0 billion on a seasonally adjusted basis, or about 34 per cent over the cyclical trough in the first quarter of 1961.

Retail and wholesale trade showed some gains which were mostly offset by declines in the service and transportation, storage and communication groups. Within manufacturing, however, strength was apparent in food and beverages, and petroleum and coal products, but was offset by downward movements in textiles, rubber, and electrical products industries.

Dividends paid to non-residents increased substantially, by about 13 per cent, so that corporation profits measured in Gross National Product declined by about 2 per cent.

Rent, interest and miscellaneous investment income, seasonally adjusted, declined by 2 per cent from the fourth quarter of 1962 to the first quarter of 1963 as a result of a fall in trading profits of Federal government business enterprises. This downward movement is largely attributable to the irregularly high level of profits recorded in these enterprises in the fourth quarter of 1962 when the railways received interim subsidies.

Net income of non-farm unincorporated business increased over 3 per cent, seasonally adjusted, in the first quarter of 1963 from the fourth quarter of 1962 level. Net income from retail trade, trans-

portation, and fishing increased quite sharply in the quarter. Declines in net income were registered in the construction, manufacturing, forestry, mining, and recreation service groups; all other industry groups showed modest increases.

Net income of farm operators from farming operations declined about 23 per cent in the first quarter. The large decline in net income, compared to a smaller decrease in the accrued net income figure, reflects a very sharp decline in participation and equalization payments made by the Canadian Wheat Board.

HOUSING CHARACTERISTICS 1961

Thus far this year the Dominion Bureau of Statistics has published a series of reports on housing based on data obtained in the 1961 Census. The titles¹ of these reports are *Basic Dwelling Characteristics*, *Rooms per Dwelling*, *Water Supply*, *Bath and Toilet Facilities*, *Heating Equipment and Fuel*, *Living Conveniences*, *Values and Rents*. These reports, together with subsequent reports, will make up Volume II, (Part 2) of the 1961 Census. In addition, an advance report *Summary Housing Characteristics*² was published late last year.

The upsurge in housing has been one of the most notable developments of the post-war period.

¹ Catalogue Nos. 93-523 to 93-528, Queen's Printer, Ottawa, 75¢ each.

² Catalogue No. 93-509, Queen's Printer, Ottawa, 50¢.

In the last censal decade the number of occupied dwellings increased by about one third, compared with a somewhat smaller rate of increase between 1941 and 1951. As in every censal period in this century, the addition to the stock of dwellings between 1951 and 1961 exceeded the growth of population. The upsurge in housebuilding has been accompanied by an improvement in standards of housing as well as by a great increase in the amenities and conveniences available to the typical householder. The level of comfort in the farm household continues in most respects to fall below that of its urban counterpart. The discovery and development of new resources has profoundly altered the pattern of household heating. With inflationary influences dominant in most of the post-war period, the improvement in housing standards has gone along with a sharp increase in values and in rents.

TABLE I. Specified Housing Characteristics for Canada, 1951¹ and 1961

Item	Number		Per cent

¹ Not including Yukon and Northwest Territories.

² Single-detached, owner-occupied, non-farm dwellings only.

On the 1961 Census date there were 4,554,493 occupied dwellings in Canada, an increase of nearly 34 per cent from the number at the 1951 Census date. This increase in the number of dwellings compares with a 30 per cent rate of growth in population. The result of the post-war housing boom is that 44 per cent of Canadian dwellings at the last Census date had been built between 1945 and 1961. The relative newness of much of the housing in Canada is reflected in the decline in the proportion of dwellings in need of major repair, from 13.4 per cent in 1951 to 5.6 per cent in 1961.

There was little change in the pattern of home ownership between 1951 and 1961; both owned and rented dwellings increased by about one third. About two thirds of all dwellings were occupied by the owners and the remainder by tenants at the last two Census dates. This proportion of ownership is considerably higher than at the time of the 1941 Census.

The pattern of type of dwelling likewise did not alter between 1951 and 1961; both single detached houses and apartments and flats increased by about 30 per cent. In 1961, as in 1951, about two thirds of all dwellings were single, detached houses and about one quarter apartments and flats.

The average number of rooms per dwelling, 5.3 in 1961 and 1951, remains almost the same as in 1941. However, during this twenty-year period the proportion of both small and large houses has declined; by 1961 nearly 65 per cent of all occupied dwellings had from 4-6 rooms, compared with 53 per cent in this size group in 1941. The average number of persons per room in 1961 was .7, unchanged from the 1951 figure. However, the proportion of "crowded" dwellings, (where the number of persons exceeds the number of rooms) 16.5 per cent in 1961, was not substantially less than 10 years earlier. Large houses continue to be more common in rural areas and in areas in early settlement.

¹ Not including the Yukon and Northwest Territories in 1941 or 1951, and Newfoundland in 1941.

The decade 1951 to 1961 witnessed a substantial improvement in living standards, as attested by the relative increase in houses having various conveniences. The proportion having hot and cold running water rose from 57 per cent in 1951 to about 80 per cent in 1961: those having a bath or shower from 61 per cent to 80 per cent: those having a flush toilet from 68 to 85 per cent: those having a mechanical refrigerator from 47 per cent to 91 per cent.

In 1951 no questions were asked about two relatively new appliances, namely, home freezers and television sets. By 1961 about 15 per cent of all dwellings had home freezers and 83 per cent had television sets.

The households having at least one automobile increased from 42 per cent in 1951 to 68 per cent in 1961 when 7 per cent of all households reported possession of at least two passenger cars.

The pattern of comforts and conveniences differs as between the urban and the farm household. However, rural electrification schemes have been important in recent years in making electrical appliances more accessible to the farm household. For example, while mechanical refrigerators were to be found in almost every urban dwelling in 1961, they were present in four out of five farm households. On the other hand, home freezers are much more commonly found in the farm household than in its urban counterpart; this appliance was in somewhat more than 40 per cent of farm households and in only about 11 per cent of urban households. More than two thirds of farm dwellings have television sets, which compares with 88 per cent of urban households. Farm families continue to lead in car ownership; in 1961, 77 per cent of farm households owned passenger automobiles as against 68 per cent of urban households. It is in plumbing facilities that the farm dwelling falls behind its urban counterpart; less than half of the farm dwellings have the facilities to be found in over 90 per cent of urban dwellings.

The twenty years 1941 to 1961 have witnessed a radical change in heating equipment and in the pattern of fuel used. In 1961, the predominant type of heating equipment was the hot air furnace; nearly half the occupied dwellings in Canada were so heated, compared with about one quarter in 1941. By 1961 over two thirds of dwellings were heated by furnaces as against less than 40 per cent in 1941, with a roughly corresponding decline in the proportion of dwellings heated by stove or space heater.

As for fuel use, liquid fuel has displaced the traditional fuels, coal, coke and wood, as the predominant source of heat. In 1961, over 56 per cent of all dwellings were so heated, compared with less than 3 per cent in 1941. In the decade 1951 to 1961 there was a spectacular increase in the use of gas for heating; this fuel was used to heat about 19 per cent of dwellings at the end of the period, compared with less than 5 per cent at the beginning.

TABLE III. Occupied Dwellings by Principal Heating Equipment and Principal Heating Fuel, Canada, 1941, 1951 and 1961

¹ Not including the Yukon and Northwest Territories in 1941 or 1951, and Newfoundland in 1941.

² Includes piped and bottled gas.

The median value of single detached non-farm owner-occupied dwellings in Canada in 1961 was \$11,021. The median varies widely as between provinces as well as between urban and rural non-farm areas. Of these dwellings, about 45 per cent were mortgaged in 1961, compared with 29 per cent in

1951. The average monthly cash rents for Canada amounted to \$65 in 1961; about 63 per cent of all tenant-occupied non-farm dwellings rented for \$50 or more in 1961 compared with 23 per cent in 1951, which is indicative of the change in rental patterns between the two dates.

DEFINITIONS

Dwelling.—A dwelling is defined as a structurally separate set of living quarters, with a private entrance either from outside the building, or from a common hall, lobby, vestibule or stairway inside. The entrance must not be through anyone else's living quarters.

Types of dwellings.—The two main types shown in this report are as follows:

- (a) **Single detached.**—Dwellings in this category are commonly called "single houses". They contain only one dwelling unit and are completely separated on all sides from any other dwelling or structure.
- (b) **Apartments and flats.**—These include:
 - (i) dwelling units in apartment blocks or apartment hotels;
 - (ii) suites in duplexes or triplexes, i.e., where the division between dwelling units is horizontal;
 - (iii) suites in structurally converted houses;
 - (iv) living quarters located above, or in the rear of stores, restaurants, garages, or other business premises;
 - (v) janitors' quarters in schools, churches, warehouses, etc.; and
 - (vi) private quarters for families of staff members in hospitals or other types of institutions.

Other types not shown separately in this report are single attached and mobile.

In need of major repair.—Includes any dwelling in a seriously run-down or neglected condition with at least one of the following major structural deficiencies:

- (a) sagging or crumbling foundation;
- (b) faulty roof or chimney;
- (c) rotting doorsills or window frames;
- (d) interior badly in need of repair.

Rooms.—In determining the number of rooms in a dwelling, only those rooms used or suitable for living purposes, including rooms occupied by servants, lodgers, or members of lodging families, are counted. Summer kitchens, sun-rooms, recreation rooms, attic rooms, etc., are counted as rooms **only** if they are finished off and suitable for year-round living quarters. Not counted as rooms are: bath-rooms, clothes closets, pantries, halls, or rooms used solely for business purposes.

"Crowded" dwelling.—For census purposes, any dwelling in which the number of persons exceeds the number of rooms occupied is classified as crowded.

Bath and toilet facilities.—Includes "exclusive" and "shared" use.

Mechanical refrigerator.—Includes electric and gas refrigerators.

Value.—Based on amount expected if the dwelling were sold to a willing buyer. Figures for values and mortgages relate to owner-occupied, non-farm, single detached dwellings only.

Rent.—Based on cash (or contract) rent paid or payable for the month of May, 1961. Figures relate to non-farm dwellings only regardless of type.

INDUSTRIAL PRODUCTION (More detail in Table 11)

The index of industrial production rose in May on the strength of increases in manufacturing production.

¹Gross National Product at market prices excluding accrued net income of farm operators from farm production. ²Before dividends paid to non-residents; see also footnotes on Table 99. ³Original data as in column 8, Table 80. ⁴Data for total housing starts and completions are not affected by the area changes mentioned in footnote 1, page S-5.

PRICES (More detail in Tables 29, 30, 31, 82, 83 and 100)

The general wholesale price index and the index of thirty industrial materials rose in June, while the index of industrial common stocks declined.

The consumer price index rose fractionally in June.

¹Prior to the census in 1961, population estimates were made quarterly on March 1, June 1, September 1 and December 1, and in addition on July 1 and January 1 of each year. After the 1961 census the quarterly estimates will be made on January 1, April 1, July 1 and October 1, as well as June 1. ¹Includes change in farm inventories. The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for withdrawals of grain from farm stocks and the change in livestock items. Because of arbitrary elements, too precise an interpretation should not be given to the series.

²Includes residual error of estimate. Source at bottom of Table 10.

¹The data in Tables 17 to 27 are based on reports from employers usually employing 15 persons and over and covering the respondents last pay period(s) in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. ²Excludes agriculture, fishing, trapping and domestic service. ³Includes storage and communication. ⁴Includes insurance and real estate. ⁵Excludes public administration and defence and such community services as health and education. Source: Employment and Payrolls, (72-002), D.B.S.

¹Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. ²Total manufacturing inventory owned by manufacturers including warehouse stocks. ³Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. ⁴End of period. Annual figures for inventories and unfilled orders are end of December values.

¹Data on shipments relate to rolling mills products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. ²Excluding shipments for re-processing at maker's own plants. ³Imports include, in addition to all other shapes, ingots, cast iron pipe, wire and wire ropes. Imports exclude castings (except cast iron pipe), forgings, fittings and couplings. Source: Primary Iron and Steel (41-001), D.B.S.

¹Data refers to city proper for Port Arthur, Fort William, Regina and Saskatoon; in other cases to metropolitan area. ²The data on building permits are collected for 1,100 municipalities and individual figures are available on request. Some of the annual totals for 1961 and 1962 differ slightly from the sum of the twelve monthly totals, due to the addition of statistics received too late to be included in the monthly data. Source: Building Permits (64-001), D.B.S.

¹The coverage was extended to 507 municipalities in 1948, and as of 1961, stands at 1,100, minor revision still being required in the table, due to the non receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation. Source: Building Permits (64-001), D.B.S.

¹A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All Metropolitan Areas and Urban Centres with a population of 5,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. ²End of period. Source: New Residential Construction (64-002), D.B.S.

¹Footnote and Source are at Bottom of Table 63. ²Starting in January 1962, the data are not entirely comparable with earlier years because more centres are included and because of the expansion of the boundaries of metropolitan areas. This is based on information from the 1961 census.

Table 66: building materials

*See also Tables 30 and 31. ¹Excluding Newfoundland. Western grain prices used in the construction of the Index prior to August 1, 1962 are final prices. From August 1, 1962 to date, the western grain prices used in the index are initial prices only for wheat, oats and barley. ²Includes subsidy on hogs. ³Based on price for hogs including Dominion premium up to September 1960. A rise in ratio favours production of beef. ⁴Previous to January, 1958, quotations referred to steers up to 1,000 lbs. Now they refer to all weights. Source: Coarse Grains Quarterly (22-001), Stocks of Meat and Lard (32-012), Index Numbers of Farm Prices of Agricultural Products (62-004), Livestock and Meat Trade Report, Dept. of Agriculture, D.B.S.

¹Overseas clearances plus U.S. imports for domestic use compiled from returns of Canadian elevator licensees and advice from American grain correspondents. Revised to include bagged seed wheat previously excluded. ²Customs exports are adjusted to reflect actual physical movement of wheat and wheat flour from Canada. Data shown for the last three months are not so adjusted. ³Annual data are monthly averages of crop year. ⁴Includes eggs for hatching. Sources: Coarse Grains Quarterly (22-001), Wheat Review (22-005), and Trade of Canada, Exports (65-004), D.B.S.

¹Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Date shown for the last three months are not so adjusted.

²Includes stocks held by manufacturers, wholesalers and other warehouses. ³The increase in percentage of capacity from October to November, 1960 reflects the fact that some mills worked more than the 25 days included in this formula as well as a reduction in total daily capacity from 171,000 hundredweight in October to 151,000 hundredweight in November. ¹Total retail trade obtained by summing "By Kinds of Business". The sum of the seasonally adjusted retail trade by regions will not necessarily add up to this total.

²Includes sales of new and used cars, trucks and buses, repair parts and services, tires and tubes, storage batteries, gasoline, some farm implements and a small amount of wholesale trade.

Source: Retail Trade (63-005), D.B.S.

Table 76: value of retail trade by types of business and provinces

monthly averages or months	lumber and building material	furniture, appliance and radio	resta- urants	fuel dealers	drug stores	jewellery stores	miscel- laneous	Atlantic provinces	Quebec	Ontario	Manitoba	Saskatch- ewan	Alberta	British Columbia

¹Short term loans outstanding extended mainly but not entirely to consumers and for other non-business purposes, by selected financial institutions. The table does not include loans of trust and loan companies, second mortgage loans on residential real estate and loans of some other financial institutions for which comparable data are not available. ²Conditional sale agreements held in connection with the financing of retail purchases of consumer goods. ³Companies licensed under the Small Loans Act. Cash loans have no conditional sales contract but are usually repaid in instalments. ⁴Excluded from the above tabulation are charge accounts of motor vehicle dealers whose credit is extended mainly to businesses rather than to consumers. Instalment credit includes conditional sales agreements only. ⁵Amount owing to oil companies, excluding commercial accounts. ⁶Includes loans fully secured by marketable bonds and stocks, home improvement loans, etc. Excludes loans to finance purchase of Canada Savings Bonds. ⁷Figures for dates other than year ends are estimated on the basis of the loans by twelve companies. ¹As from January 1958 the indexes, the imports total and the "miscellaneous commodities" total exclude various non-commercial and special transaction previously included in our imports totals. For a more detailed explanation see Trade of Canada (Exports) 1960. ²Includes pigs, ingots, blooms and billets, casting and forgings, ferro-alloys and rolling mill products. Source: Trade of Canada, Imports (65-007), D.B.S.

Table 83: merchandise imports—concluded

monthly averages or months	primary iron and steel ²	pipes, tubes and fittings	engines and boilers	farm machinery	other machinery	automobiles and parts	other iron and steel	aluminum and products	precious metals (except gold)	electrical apparatus	other non- ferrous products

¹Data in this table refer to railways with annual operating revenues of \$500,000 or over. Monthly averages for 1961 and 1962 differ from the sum of the monthly data due to revisions which cannot be allocated by months. ²Includes January to July interim payments related to recommendations of the Royal Commission on Railway Transportation.

¹Revised series with coverage limited to business failures under the Bankruptcy and Winding Up Acts, excluding individuals not operating businesses at such. ²In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements made under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available. ¹Note Circulation of Bank of Canada and chartered banks, excluding notes held by chartered banks.

by Bank of Canada and chartered banks in Canada.

²Subsidiary coin issued by the Mint less coin held by Bank of Canada and chartered banks in Canada.

³Less total float, i.e. cheques and other items in transit (net).

balances of religious, educational and welfare institutions used for business purposes, about \$140 million, were reclassified from "personal savings deposits" to "other notice deposits". The figures prior to September 30, 1957 are thus not comparable with those since that date.

Note: This series gives total new settled-for ordinary insurance sales in Canada, exclusive of revivals, increases, dividend additions, reinsurance acquired and pension bonds without insurance. Totals are estimates projected from the sales reported by 32 companies operating in Canada representing 89 per cent of ordinary insurance sales. ¹The Canada totals by months for 1961 and 1962 do not correspond to the sum of the provincial totals as revisions applied to the national total are not yet available for the provinces. Neither the monthly figures for 1961 and 1962 nor the monthly averages for 1962 have been revised to agree with the Canada total.

Note: — The definition of profits before taxes is based mainly on the accounting definitions used by corporations. However, depletion charges are added back to net profits while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all companies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by a sample of all companies incorporated in Canada (Excluding government-owned companies and incorporated co-operatives).

¹Includes Electric Power, Gas and Water Utilities. ²Includes Community, Business and Personal Service Industries. ³Includes Tobacco, Leather and Miscellaneous Manufacturing Industries. ⁴Includes Agriculture, Forestry, Fishing and Construction.

A NOTE TO USERS

A New Supplement:

A new Supplement entitled "The Canadian Statistical Review, Historical Summary" will be released shortly. This publication will contain only annual data which go back to 1926 in most series and will continue to up-date many of the annual figures carried in the last (1959) Biennial Supplement. The Historical Summary differs from the latter publication in format and content and is closely modelled on the current issues of the monthly Review. The 1963 edition of the Summary will be mailed out without charge to all subscribers of the Review and will be available to non-subscribers at a nominal price.

Changes in this Issue:

(1) Former Table 20: "Employment Indexes, Industrial Composite, by Provinces," now becoming Table 18, will be extended to include seasonally adjusted data. The D.B.S. publication entitled "Employment and Payrolls", Cat. No. 72-002 (April 1963 issue), publishes the unadjusted and seasonally adjusted index numbers of employment for the provinces back to January, 1960.

(2) Former Table 18: "Employment Indexes by Sex" is being discontinued in the Review. However, current information pertaining to this table will still be carried and published at quarterly intervals in the

monthly D.B.S. publication "Employment and Payrolls", Cat. No. 72-002.

(3) Former Table 29 is broken down into two parts. The first part (now new Table 28) will be entitled "General Wholesale Price Indexes, Principal Components, 1935-39=100" and the second part (now carried as Table 29) will be entitled "General Wholesale Price Indexes, Special Groupings, 1935-39=100".

(4) The seasonally adjusted data on merchandise exports and imports for the European Common Market, the European Free Trade Association and the Organization for Economic Cooperation and Development (Table 84) have been revised back to 1946. The entire revisions for these series are available on request.

(5) The unadjusted data for Total Inventories Owned, Inventories Held but not Owned, and Inventories Held broken down into raw materials, goods in process and finished products and the ratio of inventories owned to shipments have been revised for the year 1962 (see Table 37). The seasonally adjusted data for the same above groupings (Table 37 and Page S-6) have been revised from 1958 onwards. New sheets containing the complete revisions back to 1958 for Inventories, Shipments, New Orders and Unfilled Orders, at total level only, will be distributed shortly to all subscribers and these should be inserted into the Annual Supplement to the Review to replace the obsolete sheets.

Annual Subscription: \$5.00 — Single copies: 50c. each

This review and other publications of the Dominion Bureau of Statistics, including a free annotated catalogue of current publications, may be ordered from the Information Services Division, Dominion Bureau of Statistics, Ottawa, Ontario, and remittances made payable to the Receiver General of Canada.

2204-501-83

CANADIAN PORTFOLIO INVESTMENT IN STOCKS OF UNITED STATES CORPORATIONS

Canadians have long been substantial investors abroad, particularly in the United States. Although Canada is a major international debtor, Canadian equity investments in the United States include investments in Canadian controlled concerns having a book value of \$1,747 million at the end of 1961 (including a substantial indirect non-resident equity through foreign ownership of the Canadian parent companies). Canadian portfolio holdings of United States stocks also represent a very substantial external asset of the Canadian economy, having a current market value of the order of \$1½ billion, and producing revenue currently of about \$45 million a year.

In recent years there developed a sharp increase in Canadian interest in stocks of United States and European countries. This note presents new data on Canadian portfolio investment in United States equities.

Statements 1 and 2 present estimates of the book values of Canadian holdings of United States stocks at selected year ends from 1939 to 1961, together with some related series for the years from 1955. Statement 3 provides detail for the end of 1960 of the industrial and size distributions, by book and market values, of holdings by all Canadian residents. A supplementary analysis has revealed that about 80 per cent of the book value of Canadian portfolio investment in United States stocks at the end of 1960 was channelled into enterprises having branches, subsidiaries or affiliates in Canada.

Canadian holdings of United States stocks were built up over a long period and for diverse reasons. Before the growth of the Canadian capital market greater opportunities for investment in some types of securities existed in capital markets abroad, particularly in periods of abnormal investment or speculative activity such as occurred in the 1920's. Over the years some United States securities have been regarded as the most satisfactory vehicle for participation in particular Canadian industries; holdings have also been acquired under mergers in exchange for interests in Canadian concerns, and under stock option and employee stock purchase plans extended to the staff of Canadian subsidiaries.

Inheritances from relatives abroad have led to ownership by Canadians of a greater variety of foreign securities than might normally have been bought by them. Still further ownership has originated in the immigration to Canada of persons of means.

Many holdings by Canadians were acquired in the 1920's when interest in the New York Stock Exchange was high. With the collapse of the New York stock market in 1929 there was a contraction in Canadian holdings and the trend in the 1930's was generally downward. In the case of United States securities a less clear-cut trend was evident in the period of exchange control from the outbreak of World War II to the end of 1951. During this period there were restrictions on the export of capital from Canada and Canadians tended, on balance, to liquidate holdings. But at the same time the book value of Canadian holdings rose substantially as a result of the high earnings of United States companies in the period and of their tendency to plough back part. There were also times when Canadians increased holdings through permitted switchings of securities.

During the 1950's when there was a very high level of investment activity in Canada, the tendency to liquidate holdings of United States stocks continued, although the book value of holdings rose under the influence of retained earnings. Another likely factor in this process was the special tax credit available to Canadian residents on dividends from taxable Canadian corporations from 1948.

The long period of repatriation of Canadian investments in United States stocks came to an end in 1959. Contributing to this development were the emergence of new investment media specifically designed to facilitate Canadian investment in foreign securities, and diversification into foreign investment by some media previously directed largely to Canadian issues. In 1959 Canadians purchased on balance some \$24 million of outstanding United States equities. There were small purchase balances in each of the two succeeding years, and net purchases of some \$66 million in 1962. During the first quarter of 1963 there was a small purchase balance of less than \$1 million, but in the second quarter a resale balance of \$7 million occurred.

STATEMENT 1. Canadian Portfolio Holdings of United States Corporation Stocks
Book Values at Selected Year Ends 1939 - 61 and Related Data

Canadian Portfolio Investment in Stocks of United States Corporations

Data covering Canadian portfolio investments in United States stocks are obtained by surveys carried out at irregular intervals. Estimates of the value of holdings for other year-ends are projected on the basis of reported transactions and estimates of the effects of retained earnings, exchange rate variations, and other factors.

The most detailed information available on Canadian holdings of foreign securities relates to 1939 when an analysis was made of the declarations of Canadian holdings required under the Foreign Exchange Control Order. At that time Canadian portfolio investments in United States stocks had a book value of \$380 million. These totals comprise a great variety of United States stocks, although holdings for a relatively small number of issues of prominent United States corporations constituted a large part of the total. About 70% of the total of \$380 million of United States stocks held at that time was made up of industrial and commercial issues and 15% was in public utility issues other than railroads. The remainder was distributed in smaller amounts among railroads, mines, and financial and other companies.

A survey of Canadian holdings of stocks of about 115 United States companies was carried out in 1953-54, and was the basis of a new estimate of \$450 million for holdings of United States stocks in 1952. This survey concentrated on stock issues which were held by Canadians in substantial amounts in 1939. It showed that changes in holdings of individual issues varied greatly in both directions and rate. Among issues showing reduced holdings were railroads and public utilities in which the market interest had been less than in the case of the market leaders which were characteristic of the group of stocks where Canadian holdings had risen.

A new survey of holdings was carried out in 1961-62. Within this period about 500 United States corporations were requested to supply figures for the number of their shares held by residents of Canada. This list included the companies surveyed previously, other United States companies whose stocks are interlisted on Canadian and United States stock exchanges, companies in which Canadians were known to have acquired blocks of stock through take-over offers, and a selection of other important United States companies from FORTUNE'S lists of the 500 largest United States industrial corporations and the 50 largest banks, merchandising, transportation, life insurance and utility companies. The response to date to the 1961-62 survey has been well over 90%. The accompanying statements provide detail of the new estimate of \$827 million established for the end of 1960.

This figure reflects an increase of \$337 million in the book value of holdings from \$490 million at the end of 1954. In the six-year period Canadians sold on balance about \$62 million of holdings (at market values). They acquired some \$34 million of new issues, and about \$5 million of existing holdings were retired. These transactions accordingly reflected a net disposal of holdings (on a transactions value basis) of \$33 million. Some \$27 million of United States stocks were acquired by residents under offers in exchange for Canadian investments, transactions which are not recorded in the capital account of the balance of payments. A further addition of about \$42 million was made to Canadian portfolio holdings of United States stock as the result of shifts in the position of Canadian investors to a minority role in some corporations which had previously been controlled by Canadians and shown as direct investments. All the foregoing factors together would account for an increase in Canadian holdings of about \$36 million, or perhaps \$45 million on a book value basis. Allowance for variations in the exchange rate would add \$12 million to the Canadian dollar value of holdings, leaving an increase of about \$275 million attributable to internally generated growth through the retention of earnings.

Holdings of United States stocks covered in these estimates are confined to those owned beneficially by residents of Canada. Substantial additional amounts are held by Canadian intermediaries for the benefit of non-residents of Canada.

The book values used in the construction of the estimates are derived from the financial statements of the companies concerned. They take account of the paid-in capital, and earned (appropriated or unappropriated), appraisal or similar capital surpluses, less any accumulated deficit, on the basis of the consolidated balance sheet. They bear no relationship to the cost or carrying value which might be recorded by the investor. The market values are based upon the reported average price for the last day of trading in 1960. The resulting figures have, in each case, been converted to Canadian dollar equivalents at the appropriate exchange rate.

The benchmark estimates are important, not only for the new detail which they reveal in themselves, but also as the basis for future estimates of income receipts from these holdings, capital flows arising from offerings to shareholders, retirements, etc. It will be noted that they are made possible through the voluntary cooperation of a large number of United States corporations whose assistance is gratefully acknowledged.

INDUSTRIAL PRODUCTION (More detail in Table 11)

The index of industrial production was virtually unchanged in June. The small increase in manufacturing was offset by an almost 2 per cent decline in mining output with electric power and gas utilities unchanged.

	total industrial production	manufacturing production			mining production	electricity and gas	total iron and steel
		total	durables	non-durables

¹Prior to the census in 1961, population estimates were made quarterly on March 1, June 1, September 1 and December 1, and in addition on July 1 and January 1 of each year. After the 1961 census the quarterly estimates will be made on January 1, April 1, July 1 and October 1, as well as June 1. ¹Includes change in farm inventories. The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for withdrawals of grain from farm stocks and the change in livestock items. Because of arbitrary elements, too precise an interpretation should not be given to the series.

²Includes residual error of estimate. Source at bottom of Table 10.

¹The data in Tables 17 to 27 are based on reports from employers usually employing 15 persons and over and covering the respondents last pay period(s) in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. ²Excludes agriculture, fishing, trapping and domestic service. ³Includes storage and communication. ⁴Includes insurance and real estate. ⁵Excludes public administration and defence and such community services as health and education. Source: Employment and Payrolls, (72-002), D.B.S.

¹Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. ²Total manufacturing inventory owned by manufacturers including warehouse stocks. ³Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. ⁴End of period. Annual figures for inventories and unfilled orders are end of December values. Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D.B.S.

¹Data on shipments relate to rolling mills products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. ²Excluding shipments for re-processing at maker's own plants. ³Imports include, in addition to all other shapes, ingots, cast iron pipe, wire and wire ropes. Imports exclude castings (except cast iron pipe), forgings, fittings and couplings. Source: Primary Iron and Steel (41-001), D.B.S.

¹Data refers to city proper for Port Arthur, Fort William, Regina and Saskatoon; in other cases to metropolitan area. ²The data on building permits are collected for 1,100 municipalities and individual figures are available on request. Some of the annual totals for 1961 and 1962 differ slightly from the sum of the twelve monthly totals, due to the addition of statistics received too late to be included in the monthly data. Source: Building Permits (64-001), D.B.S.

¹The coverage was extended to 507 municipalities in 1948, and as of 1961, stands at 1,100, minor revision still being required in the table, due to the non receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation. Source: Building Permits (64-001), D.B.S.

¹A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All Metropolitan Areas and Urban Centres with a population of 5,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. ²End of period. Source: New Residential Construction (64-002), D.B.S.

¹Footnote and Source are at Bottom of Table 63. ²Starting in January 1962, the data are not entirely comparable with earlier years because more centres are included and because of the expansion of the boundaries of metropolitan areas. This is based on information from the 1961 census.

*See also Tables 30 and 31. ¹Excluding Newfoundland. Western grain prices used in the construction of the Index prior to August 1, 1962 are final prices. From August 1, 1962 to date, the western grain prices used in the index are initial prices only for wheat, oats and barley. ²Includes subsidy on hogs. ³Based on price for hogs including Dominion premium up to September 1960. A rise in ratio favours production of beef. ⁴Previous to January, 1958, quotations referred to steers up to 1,000 lbs. Now they refer to all weights. Source: Coarse Grains Quarterly (22-001), Stocks of Meat and Lard (32-012), Index Numbers of Farm Prices of Agricultural Products (62-004), Livestock and Meat Trade Report, Dept. of Agriculture, D.B.S.

¹Overseas clearances plus U.S. imports for domestic use compiled from returns of Canadian elevator licensees and advice from American grain correspondents. Revised to include bagged seed wheat previously excluded. ²Customs exports are adjusted to reflect actual physical movement of wheat and wheat flour from Canada. Data shown for the last three months are not so adjusted. ³Annual data are monthly averages of crop year. ⁴Includes eggs for hatching. Source: Coarse Grains Quarterly (22-001), Wheat Review (22-005), and Trade of Canada, Exports (65-004), D.B.S.

¹Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Date shown for the last three months are not so adjusted. ²Includes stocks held by manufacturers, wholesalers and other warehouses. ³The increase in percentage of capacity from October to November, 1960 reflects the fact that some mills worked more than the 25 days included in this formula as well as a reduction in total daily capacity from 171,000 hundredweight in October to 151,000 hundredweight in November. Source: Grain Milling Statistics (32-003), Margarine Statistics (32-005), Quarterly Report on Processed Foods (32-007), D.B.S.

¹Total retail trade obtained by summing "By Kinds of Business". The sum of the seasonally adjusted retail trade by regions will not necessarily add up to this total.

²Includes sales of new and used cars, trucks and buses, repair parts and services, tires and tubes, storage batteries, gasoline, some farm implements and a small amount of wholesale trade.

Source: Retail Trade (63-005), D.B.S.

¹Short term loans outstanding extended mainly but not entirely to consumers and for other non-business purposes, by selected financial institutions. The table does not include loans of trust and loan companies, second mortgage loans on residential real estate and loans of some other financial institutions for which comparable data are not available. ²Conditional sale agreements held in connection with the financing of retail purchases of consumer goods. ³Companies licensed under the Small Loans Act. Cash loans have no conditional sales contract but are usually repaid in instalments. ⁴Excluded from the above tabulation are charge accounts of motor vehicle dealers whose credit is extended mainly to businesses rather than to consumers. ⁵Excluded from the above tabulation are charge accounts only. ⁶Amount owing to oil companies, excluding commercial accounts. ⁷Includes loans fully secured by marketable bonds and stocks, home improvement loans, etc. Excludes loans to finance purchase of Canada Savings Bonds. ⁸Figures for dates other than year ends are estimated on the basis of the loans by twelve companies. ¹As from January 1958 the indexes, the imports total and the "miscellaneous commodities" total exclude various non-commercial and special transactions previously included in our imports totals. For a more detailed explanation see Trade of Canada (Exports) 1960. ²Includes pigs, ingots, blooms and billets, castings and forgings, ferro-alloys and rolling mill products.

¹Data in this table refer to railways with annual operating revenues of \$500,000 or over. Monthly averages for 1961 and 1962 differ from the sum of the monthly data due to revisions which cannot be allocated by months. ²Includes January to July interim payments related to recommendations of the Royal Commission on Railway Transportation.

¹Revised series with coverage limited to business failures under the Bankruptcy and Winding Up Acts, excluding individuals not operating businesses as such. ²In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements made under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available. ¹Note Circulation of Bank of Canada and chartered banks, excluding notes held by chartered banks.²Subsidiary coin issued by the Mint less coin held by Bank of Canada and chartered banks in Canada.³Less total float, i.e. cheques and other items in transit (net).
At September 30, 1957, the deposit balances of religious, educational and welfare institutions used for business purposes, about \$140 million, were reclassified from "personal savings deposits" to "other notice deposits". The figures prior to September 30, 1957 are thus not comparable with those since that date.

Note: This series gives total new settled-for ordinary insurance sales in Canada, exclusive of revivals, increases, dividend additions, reinsurance acquired and pension bonds without insurance. Totals are estimates projected from the sales reported by 32 companies operating in Canada representing 89 per cent of ordinary insurance sales. ¹The Canada totals by months for 1961 and 1962 do not correspond to the sum of the provincial totals as revisions applied to the national total are not yet available for the provinces. Neither the monthly figures for 1961 and 1962 nor the monthly averages for 1962 have been revised to agree with the Canada total.

Note: — The definition of profits before taxes is based mainly on the accounting definitions used by corporations. However, depletion charges are added to net profits while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits all companies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by a sample of all companies incorporated in Canada (Excluding government-owned companies and incorporated co-operatives). ¹Includes Tobacco, Leather and Miscellaneous Manufacturing industries. ²Includes Electric Power, Gas and Water Utilities. ³Includes Community, Business and Personal Service Industries. ⁴Includes Agriculture, Forestry, Fishing and Construction. Source: Corporation Profits (61-003), D.B.S.

A NOTE TO USERS

Changes in this Issue

(1) The publication of exports, by commodities, in Table 82 is being resumed in this issue. The commodities are classified according to the Standard Commodity Classification which was implemented for exports in January, 1961. The classification contains five major divisions, as follows:

- (a) live animals,
- (b) food, feed, beverages, and tobacco,
- (c) crude materials, inedible,
- (d) fabricated materials, inedible,
- (e) end products, inedible.

The new Table 82 presents the monthly figures for total domestic exports, the totals for the five divisions, and the important commodities or commodity groups within each division. The figures in the five divisions do not add to total domestic exports as special trade transactions are excluded, which are chiefly contractors' equipment and tools, and shipments under \$100 in value.

The intention of the table is to summarize the commodity exports by the main divisions, and at

the same time to give enough detail to bring out, with a limited number of series, the main developments in the export of commodities.

The indexes (1948=100) for value of exports, for prices of exports and for the physical volume of exports continue to be shown as formerly.

(2) The publication of imports, by commodities, is also being resumed in this issue. Certain changes, as indicated in the footnotes, have been made in preparation for the introduction of the Standard Commodity Classification to imports in January, 1964. The present classification continues, therefore, to be the same as before, based on the chief component material of the products.

Further Information

Greater detail on the Standard Commodity Classification is available in the June, 1961, issue of the Canadian Statistical Review in an article entitled "The Standard Industrial Classification and the Standard Commodity Classification, Part II".

NATIONAL ACCOUNTS—INCOME AND EXPENDITURE

SECOND QUARTER 1963

Introductory Review

Gross National Product continued to advance, in the second quarter of 1963. Estimated at \$42,436 million, seasonally adjusted at annual rates, it was slightly more than 1 per cent higher than the first quarter. Of this increase, about one third reflects a rise in prices, and the remainder a gain in the volume of the nation's production.

The most significant contributions to the increase in demand came from a sharp expansion in exports of merchandise, higher outlays for fixed capital, and increased consumer spending. The expansion in merchandise exports, partly attributable to the recovery of European production after an exceptionally severe winter, was reflected in the highest Canadian trade surplus since 1952 and a decline in the overall deficit on current international account of approximately \$150 million at annual rates. The forward impetus in fixed capital spending came from higher outlays on residential and non-residential construction with a more moderate increase in machinery and equipment; the general advance in this area contrasted with the rather hesitant behaviour which has characterized capital spending in the current expansion. The increase in consumer spending stemmed from the higher level of purchases of durable goods, and from the well established pattern of growth in purchases of services. Government spending on goods and services which moved moderately higher also contributed to the expansion. Inventories were the only weak element in demand; a modest liquidation occurred in the non-farm business sector.

The income side of the accounts in the second quarter shows a slower rate of increase in labour income; corporate profits rose moderately, after having been virtually unchanged in the first quarter, and accrued net farm income from farm production increased. It may be noted that the estimate of the value of the 1963 crop is higher than the long term average assumed in the first quarter estimate.

Personal income rose appreciably more than National Income in the second quarter, largely as a result of the very high payments made to farmers by the Canadian Wheat Board. These payments are among the factors making for a sharp rise in the rate of personal saving in the period. Another feature of the personal account is the drop in personal taxes (partly a result of increased allowances for dependents introduced in 1962). As a consequence, disposable income rose even more than personal income.

The gain in production in the second quarter was accompanied by an increase in employment of over 1 per cent in total and of nearly 2 per cent in

the non-farm sector. The rate of unemployment, 5.7 per cent of the labour force, remained unchanged between the two quarters.

The index of industrial production, covering the traditional areas of mining, manufacturing, and electric power and gas utilities was up by almost 2 per cent during the quarter. Manufacturing advanced by a similar amount, but the increase in non-durables was appreciably higher than in durables. Gains in excess of 2 per cent were recorded in mining and of less than 2 per cent in utilities. Within non-durables manufacturing significant increases occurred in textiles, chemicals and paper products. However it should be noted that the latter two groups were adversely affected by industrial disputes in the first quarter. Within durables, all major groups but wood products (which declined) were higher by 1 to 2 per cent in the quarter. Both the iron and steel products and the transportation equipment groups continued their expansionary movements of the past several quarters.

Developments recorded thus far in the year may also be viewed in the light of the economic situation in the first half of 1962. In this comparison Gross National Product was up 6 per cent in current dollars and about 4 per cent in real terms. All major components except business inventories contributed to the gain in total expenditure. The area of greatest strength was the external sector, with exports substantially higher and imports not much changed—in fact, slightly lower if the price factor is taken into account. Consumer spending was also strong. The behaviour of business inventories presents a contrast in the year-to-year comparison; the building up of stocks was of some consequence in the first half of 1962 and negligible in the first half of the current year.

The first half year comparison shows gains in employment of about 1½ per cent in total and of 2 per cent in the non-farm sector. The rate of unemployment was somewhat lower—5.7 per cent of the labour force in the first half of 1963 as against 5.9 per cent a year earlier.

Price Movements

There was a modest increase in prices in the second quarter following little change in the preceding period. Within the sectors all prices with the exception of government and exports showed small price increases. The price increase for government was irregularly high partly because of wage increases, and retroactive payments to members of the armed forces. The prices of exported goods and services showed a fractional decline.

GROSS NATIONAL PRODUCT ROSE BY 1 PER CENT TO REGISTER ITS NINTH CONSECUTIVE QUARTERLY INCREASE

THE MAIN CONTRIBUTORS TO THE OVERALL ADVANCE WERE INCREASED FIXED CAPITAL OUTLAYS, CONSUMER SPENDING AND A REDUCED NET IMPORT BALANCE

STRENGTH IN MERCHANDISE EXPORTS RAISED THE TRADE SURPLUS AND PLAYED A MAJOR ROLE IN REDUCTION OF THE OVERALL DEFICIT

FIXED CAPITAL SHOWED ONE OF THE SHARPEST INCREASES IN THE PRESENT EXPANSIONARY PERIOD WITH RESIDENTIAL CONSTRUCTION HIGHER BY 5 PER CENT

Gross National Expenditure	0.7	0.7	0.2 ³	0.5 ³

¹ These data reflect a food price index that has been adjusted to take account of an estimated reduction in expenditures on citrus fruits and juices.

² These changes are irregularly high partly because of an increase in wage rates together with retroactive payments to certain groups in the federal civil service in the first quarter and to members of the armed forces in the second quarter.

³ A base-weighted price index which is more indicative of actual price changes than the implicit indexes shown above (which are currently weighted) shows a change in price in the aggregate of 0.5 per cent between the fourth and first quarters and by 0.3 per cent between the first and second quarters.

The Components of Demand

Rising slightly more than one-half of one per cent in the second quarter, consumer spending made a modest contribution to the expansion in economic activity. The latest recorded increase contrasts with relatively large increments in the two preceding quarters and near stability in the two mid quarters of 1962. It was accompanied by the largest gain in disposable income in the past five quarters; the latter was affected by special factors to which reference was made in the introduction. The resulting sharp rise in personal saving followed a moderate gain in the first quarter.

Price increases at the total level were moderate, with both goods and services prices rising by about the same amount. Non-durables accounted for the rise in goods prices: some of the items, such as gas, oil and grease, and men's clothing, which do not weigh heavily in the total, showed larger increases, which were partially offset by fractional declines in the prices of other commodities.

Some strength in personal spending came from durable goods, which increased 3 per cent. Net purchases of new and used cars rose 6 per cent, with vehicles of overseas manufacture showing their first increase in several quarters while vehicles of North American manufacture also showed an increase in sales. Purchases of all other durables

showed lesser increases, except appliances and radios, which declined almost 3 per cent in the quarter.

The increase in total personal spending was dampened by a ½ per cent decline in expenditure on non-durable goods. Purchases of food were practically unchanged and as price increases were very slight, there was no change in real consumption.

Expenditure on services, rising by 1½ per cent, showed a rate of growth in line with the average for recent years. Net expenditure abroad, being mainly the difference between the expenditures on personal account of Canadian travellers abroad and the expenditures of foreign travellers in Canada, has been growing smaller, and now contributes less significantly to movements in total services. Among other services, expenditures on shelter increased by 2 per cent, as did expenditures on personal services, while expenditure on transportation decreased fractionally.

Outlays on fixed capital registered a significant gain in the second quarter. At an annual rate of \$7,252 million, after allowance for seasonal factors, capital spending was slightly less than 3 per cent above the first quarter. Expenditures advanced on a broad front with higher outlays on new residential construction, machinery and equipment, and non-residential building and engineering

construction. Although expenditures during the first half of the year, as in the second quarter, were running almost 3 per cent ahead of the year 1962, this level is below the almost 8 per cent forecast in the mid-year review of investment intentions.

The value of new residential construction was 5 per cent higher in the second quarter and at an annual rate of \$1,640 million indicates a level of spending above that experienced since the 1958-1959 expansion. The increase arises mainly from the completion of dwelling units under construction; the annual rate of completions after seasonal adjustment rose by almost 18 per cent to 140 thousand; the annual rate of starts in the second quarter was 137 thousand, less than 1½ per cent above the previous quarter. The data point to a sharp rise in construction of multiple dwellings units in the second quarter (in centres of population of 5,000 and over) with an almost corresponding decline in single detached dwellings. Mortgage loan approvals in 1963 suggest that the increase in new residential construction activity is being financed by conventional institutional mortgage loans rather than by loans approved under the National Housing Act.

Combined capital outlays on plant and machinery in the second quarter rose by over 2 per cent to an annual rate of \$5,612 million. The value of non-

residential building and engineering works advanced by 3 per cent to \$2,764 million, while a 1½ per cent increase in spending on machinery and equipment raised the annual rate for this component to \$2,848 million. The combined estimate for plant and machinery for the first half of the year was running almost 3½ per cent above 1962.

The estimated increase in expenditures on machinery and equipment brings the annual rate in the second quarter to the highest current value attained since the investment boom in 1957, although in constant dollars the figure still remains well below this peak. However, in view of the lack of complete data on imports of machinery, the overall estimate of investment in machinery should be regarded as tentative.

The declining rate of stock accumulation which set in sharply in the fourth quarter of 1962 and continued in the first quarter of the current year, gave way to a stock liquidation in the second quarter. Stocks were depleted in wholesale and retail trades, while in manufacturing industries a small stock accumulation occurred. The movement in investment in non-farm business inventories, by industry, over the past four quarters is shown in the following table:

Changes in Non-Farm Business Inventories

(Seasonally adjusted at annual rates)

	3Q 1962	4Q 1962	1Q 1963	2Q 1963
	millions of dollars			
Manufacturing	396	156	- 44	36
Wholesale	72	132	- 28	- 36
Retail	388	- 16	76	- 76
"Other"	- 56	- 100	60	36
Grand total	800	172	64	- 40

In manufacturing industries, the increase of stocks of wood, furniture, and tobacco industries counterbalanced the almost general, though small, liquidation of the rest of the industry groups. Since inventories increased less than shipments, the stock-to-sales ratio declined. By stages of production, accumulation was evident in raw and finished goods, while stocks of goods in process showed a drop.

In wholesale trades, the prevailing trend was towards depletion among both durable and non-durable lines. The stock-to-sales ratio was the lowest since the first quarter of 1957.

In retail trades, the depletion of stocks of motor vehicle dealers and of farm implements dealers among durables, and of apparel among non-

durables, resulted in an overall depletion. The stock-to-sales ratio remained virtually unchanged from that of the previous quarter.

The import balance on current account transactions with non-residents fell to an annual rate of \$420 million in the second quarter of 1963, after allowances for seasonal influences, a continuation of the lower level of deficits which has been apparent since the final quarter of last year. Total exports of goods and services reached a seasonally adjusted annual rate of \$8.9 billion, 4½ per cent above the previous quarter, and imports of goods and services rose by 2½ per cent to \$9.3 billion. The improvement in the deficit from the first quarter arose mainly from an increased surplus on merchandise trade.

The surplus on merchandise trade was \$500 million at annual rates in the second quarter, an increase from the first quarter figure of \$384 million, and the highest trade surplus since 1952. At an annual rate of \$6.9 billion, after discounting seasonal factors, exports of merchandise rose by 5½ per cent with a particularly sharp pick-up in sales to the United Kingdom. An upsurge in exports to Western Europe may partly reflect the recovery of production from the disruptive effects of an exceptionally severe winter. Exports to the United States were also higher. Some of the main commodities in which there were increased sales in the second quarter, after seasonal adjustment, include nickel in particular, aluminum, copper and newsprint (partly reflecting the settlement of the labour dispute in the newspaper industry in the United States); increases, however, were fairly widespread. Imports of merchandise rose by 4 per cent to an annual rate of \$6.4 billion at the total level, but commodity detail is not yet available to enable this increase to be identified.

The deficit from services and other non-merchandise transactions showed little change at an annual rate of \$920 million as receipts were just over 1 per cent higher at \$1,944 million and payments were almost unchanged at \$2,864 million. The slight increase in receipts originated mainly in freight and shipping; other changes tended to be small and offsetting. On the payments side of the account, the main movements were offsetting as a 4 per cent decline in income payments of interest and dividends was largely balanced by a 5 per cent increase in payments for freight and shipping services.

The Government Sector

The major components of expenditure, for all levels of government combined, showed an increase between the first and second quarters of 1963, raising total expenditures 2½ per cent, seasonally adjusted at annual rates. Total revenues were almost unchanged, so that there was an increase of \$352 million in the total deficit, from \$716 million in the first quarter of 1963 to \$1,068 million in the second.

Federal outlays on goods and services, estimated at \$3.0 billion, fell nearly 3 per cent from the first quarter, but this decline was more than offset by a rise in provincial-municipal expenditure which increased almost 4 per cent to \$5.3 billion. Federal defence payments showed a 10 per cent rise, almost half of which is attributable to retroactive pay increases to the armed forces while non-defence outlays fell by nearly 15 per cent. It may be noted that both defence and non-defence outlays have shown erratic and divergent movements in recent quarters. After steadily increasing over the past few quarters, there was a decline in provincial-municipal expenditure on the construction of vocational schools, but increased spending on other goods and services more than offset this drop.

Subsidies paid by the federal and provincial governments increased by somewhat more than 50 per cent between the quarters, mainly as a result of the large interim payment to railway companies by the federal government. There was also a 4 per cent increase in federal transfer payments to other levels of government primarily because of higher payments to the provinces for unemployment assistance and for health grants, and to the municipalities.

Personal direct tax revenues dropped by 5 per cent from the first to the second quarter, reflecting a considerable increase in refunds of income taxes partly the result of higher exemptions allowed in 1962 for wholly dependent children.

There was a minor drop in receipts from indirect taxes which occurred at the federal level; it was largely the result of the abolition effective as of April 1, 1963, of the remaining temporary emergency surcharges imposed in 1962, which lowered revenues from customs import duties.

Income Flows

Labour income in the second quarter of 1963 is estimated at a seasonally adjusted annual rate of \$21.5 billion, somewhat more than 1 per cent higher than in the first quarter when it was irregularly high, partly by reason of substantial retroactive payments to federal government employees. After adjustment for these payments, the first to second quarter increase was nearly 1½ per cent, compared with one of 2½ per cent in the first quarter.

The quarterly gain in labour income reflected varied and somewhat divergent movements as between industries. Labour income in manufacturing was up slightly more than 1½ per cent, matching the advance of the previous quarter.

Among the service-producing industries, finance and service continued to register relatively large gains—close to 2½ per cent. In trade, labour income rose about 1½ per cent, while a further falling off in railway employment restrained the increase in labour income in the transportation, storage and communication group. Following the first quarter's large retroactive payment mentioned earlier, labour income in public administration fell by over 1 per cent in the second quarter; but for this special factor there would have been an increase in excess of 2 per cent.

The outcome of the movements described above was that wages and salaries in the goods and in the service-producing groups showed an equal rate of increase in the second quarter. Labour inputs and labour prices appear to have been about equally important in the moderate rise in the flow of income.

To put the second quarter's increase in labour income in the perspective of recent experience, the latest recorded rate of gain is lower than in the preceding quarter, higher than in the third and fourth quarters of 1962, and lower than in the first

two quarters of that year, when adjustment is made for the non-recurring element of retroactive payments. Much the same pattern is apparent in the cyclically sensitive goods-producing industries.

Corporation profits (before taxes and before dividends paid to non-residents) rose by about 3 per cent in the second quarter to an annual rate of \$4.1 billion on a seasonally adjusted basis. This was nearly 40 per cent higher than the level prevailing at the beginning of the current expansion beginning in the first quarter, 1961.

It may be noted that dividends paid to non-residents dropped substantially by about 15 per cent from the high first quarter level, so that corporation profits measured for national accounting purposes, i.e., less dividends paid abroad, increased by about 7 per cent.

Higher profits were experienced by all industries except retail trade. Profits in the electric power, gas and water utilities industry reflected the transfer from the private to the public business sector of the private corporations acquired on May 1, 1963 by the Quebec Hydro Electric Commission. Finance, insurance and real estate, and manufacturing groups showed considerable strength. Transportation, storage, and communication group showed no change.

Within manufacturing, higher profits were recorded in all groups except food and beverages, metal industries (including transportation equipment), and petroleum and coal products; profits of wood industries remained unchanged.

Rent, interest, and miscellaneous investment income, seasonally adjusted, rose by about 5 per cent, mainly due to a rise in trading profits of government business enterprises, which reflected the interim subsidy received by the Canadian National Railway System as well as the acquisitions by the Quebec Hydro Electric Commission mentioned above.

Net income of non-farm unincorporated business, seasonally adjusted, declined about 2 per cent in the second quarter from the first quarter rate. There was a sharp drop in net income of retail trade, caused by lower profit sales ratios, partially offset by modest increases in the construction, personal service, business service, forestry, and mining industries.

Accrued net income of farm operators from farm production in the second quarter rose by over 7 per cent, seasonally adjusted. Net income received by farm operators from farm production in the second quarter rose to a level of \$1.8 billion. The increase can be attributed to the very high payments made by the Canada Wheat Board during the quarter.

INDUSTRIAL PRODUCTION (More detail in Table 11)

The index of industrial production declined by 1.6 per cent in July as weaknesses developed in both mining and manufacturing. Partially offsetting these declines was a more than 3 per cent rise in the output of electric power and gas utilities.

		total industrial production	manufacturing production			mining production	electricity and gas	total iron and steel

EXPORTS AND IMPORTS (More detail in Table 84)

Exports advanced in August as increases to "all other countries" and the United States were partially offset by a decrease to the United Kingdom. Imports declined moderately in the same month due to slight decreases from United Kingdom and "all other countries".

SELECTED QUARTERLY SERIES (More detail in Tables 6, 10, 61, 62, 67, 80 and 90)

Gross National Product advanced slightly more than one per cent in the second quarter. Of this increase, about one third reflected a rise in prices and the remainder a gain in the volume of production.

gross national product at market prices		personal disposable income	corporation profits before taxes ²	farm cash income	consumer credit outstanding total ³	dwelling units all centres ⁴		commercial failures

¹Gross National Product at market prices excluding accrued net income of farm operators from farm production. ²Before dividends paid to non-residents; see also footnotes on Table 99. ³Original data as in column 8, Table 80. ⁴Data for total housing starts and completions are not affected by the area changes mentioned in footnote 1, page S-5.

PRICES (More detail in Tables 28, 30, 31, 82, 83 and 100)

The general wholesale index, the index of thirty industrial materials and the index of industrial common stocks declined between July and August.

The consumer price index rose in August reflecting primarily increases in the food component and the in the non-durables group.

		wholesale general index	thirty industrial materials	export prices	import prices	industrial common stocks	consumer price index (1949=100)

¹Includes change in farm inventories. The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for withdrawals of grain from farm stocks and the change in livestock items. Because of arbitrary elements, too precise an interpretation should not be given to the seires.

²Includes residual error of estimate. Source at bottom of Table 10.

¹The data in Tables 17 to 26 are based on reports from employers usually employing 15 persons and over and covering the respondents' last pay period(s) in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. ²Excludes agriculture, fishing, trapping and domestic service. ³Includes storage and communication. ⁴Includes insurance and real estate. ⁵Excludes public administration and defence and such community services as health and education. Source: Employment and Payrolls, (72-002), D.B.S.

¹Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. ²Total manufacturing inventory owned by manufacturers including warehouse stocks. ³Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. ⁴End of period. Annual figures for inventories and unfilled orders are end of December values.

¹Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp.

²Rough cords of 128 cu. ft. ³Customs exports. ⁴Mill shipments destined for export. Sources: Pulpwood Production (25-001), Trade of Canada, Exports (65-004), D.B.S., Bulletins of Canadian Pulp and Paper Association and Newsprint Association of Canada.

¹Data on shipments relate to rolling mills products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. ²Excluding shipments for re-processing at maker's own plants. ³Imports include, in addition to all other shapes, ingots, cast iron pipe, wire and wire ropes. Imports exclude castings (except cast iron pipe), forgings, fittings and couplings. Source: Primary Iron and Steel (41-001), D.B.S.

¹Data refers to city proper for Port Arthur, Fort William, Regina and Saskatoon; in other cases to metropolitan area. ²The data on building permits are collected for 1,100 municipalities and individual figures are available on request. Some of the annual totals for 1961 and 1962 differ slightly from the sum of the twelve monthly totals, due to the addition of statistics received too late to be included in the monthly data. Source: Building Permits (64-001), D.B.S.

¹The coverage was extended to 507 municipalities in 1948, and as of 1961, stands at 1,100, minor revision still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation. Source: Building Permits (64-001), D.B.S.

¹A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All Metropolitan Areas and Urban Centres with a population of 5,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. ²End of period. Source: New Residential Construction (64-002), D.B.S.

¹Footnote and Source are at Bottom of Table 63. ²Starting in January 1962, the data are not entirely comparable with earlier years because more centres are included and because of the expansion of the boundaries of metropolitan areas. This is based on information from the 1961 census.

*See also Tables 30 and 31. ¹Excluding Newfoundland. Western grain prices used in the construction of the Index prior to August 1, 1962 are final prices. From August 1, 1962 to date, the western grain prices used in the index are initial prices only for wheat, oats and barley. ²Includes subsidy on hogs. ³Based on price for hogs including Dominion premium up to September 1960. A rise in ratio favours production of beef. ⁴Previous to January, 1958, quotations referred to steers up to 1,000 lbs. Now they refer to all weights. ¹Overseas clearances plus U.S. imports for domestic use compiled from returns of Canadian elevator licensees and advice from American grain correspondents. Revised to include bagged seed wheat previously excluded. ²Customs exports are adjusted to reflect actual physical movement of wheat and wheat flour from Canada. Data shown for the last three months are not so adjusted. ³Annual data are monthly averages of crop year. ⁴Includes eggs for hatching.

¹Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Date shown for the last three months are not so adjusted. ²Includes stocks held by manufacturers, wholesalers and other warehouses. ³The increase in percentage of capacity from October to November, 1960 reflects the fact that some mills worked more than the 25 days included in this formula as well as a reduction in total daily capacity from 171,000 hundredweight in October to 151,000 hundredweight in November. Source: Grain Milling Statistics (32-003), Margarine Statistics (32-005), Quarterly Report on Processed Foods (32-007), D.B.S.

¹Total retail trade obtained by summing "By Kinds of Business". The sum of the seasonally adjusted retail trade by regions will not necessarily add up to this total.

²Includes sales of new and used cars, trucks and buses, repair parts and services, tires and tubes, storage batteries, gasoline, some farm implements and a small amount of wholesale trade.

Source: Retail Trade (63-005), D.B.S.

¹Short term loans outstanding extended mainly but not entirely to consumers and for other non-business purposes, by selected financial institutions. The table does not include loans of trust and loan companies, second mortgage loans on residential real estate and loans of some other financial institutions for which comparable data are not available. ²Conditional sale agreements held in connection with the financing of retail purchases of consumer goods. ³Companies licensed under the Small Loans Act. Cash loans have no conditional sales contract but are usually repaid in instalments. ⁴Excluded from the above tabulation are charge accounts of motor vehicle dealers whose credit is extended mainly to businesses rather than to consumers. Instalment credit includes conditional sales agreements only. ⁵Amount owing to oil companies, excluding commercial accounts. ⁶Includes loans fully secured by marketable bonds and stocks, home improvement loans, etc. Excludes loans to finance purchase of Canada Savings Bonds. ⁷Figures for dates other than year ends are estimated on the basis of the loans by twelve companies. ¹Data in this table refer to railways with annual operating revenues of \$500,000 or over. Monthly averages for 1961 and 1962 differ from the sum of the monthly data due to revisions which cannot be allocated by months. ²Includes January to July interim payments related to recommendations of the Royal Commission on Railway Transportation. Source: Railway Operating Statistics (52-003) monthly, (52-206) annual, D.B.S.

¹Note Circulation of Bank of Canada and chartered banks, excluding notes held by chartered banks.

²Subsidiary coin issued by the Mint less coin held

by Bank of Canada and chartered banks in Canada.

³Less total float, i.e. cheques and other items in transit (net).

At September 30, 1957, the deposit balances of religious, educational and welfare institutions used for business purposes, about \$140 million, were reclassified from "personal savings deposits" to "other notice deposits". The figures prior to September 30, 1957 are thus not comparable with those since that date.

Note: This series gives total new settled-for ordinary insurance sales in Canada, exclusive of revivals, increases, dividend additions, reinsurance acquired and pension bonds without insurance. Totals are estimates projected from the sales reported by 32 companies operating in Canada representing 89 per cent of new ordinary insurance sales. ¹The Canada totals by months for 1961 and 1962 do not correspond to the sum of the provincial totals as revisions applied to the national total are not yet available for the provinces. Neither the monthly figures for 1961 and 1962 nor the monthly averages for 1962 have been revised to agree with the Canada total. Note: — The definition of profits before taxes is based mainly on the accounting definitions used by corporations. However, depletion charges are added back to net profits while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all companies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by a sample of all companies incorporated in Canada (Excluding government-owned companies and incorporated co-operatives).

¹Includes Electric Power, Gas and Water Utilities. ²Includes Community, Business and Personal Service Industries. ³Includes Tobacco, Leather and Miscellaneous Manufacturing Industries. ⁴Includes Agriculture, Forestry, Fishing and Construction.

A NOTE TO USERS

Resumption of Data

The publication of shipments and inventories in manufacturing in Tables 32 and 33 is being resumed in this issue. The new information is for selected industries according to the revised Standard Industrial Classification and has been extended back on the new basis to January, 1958.

Of the 20 industry groups in manufacturing in the new classification, 11 are selected for publication in the Review. Seven of these, namely, (1) Foods and Beverages, (2) Textiles, (3) Transportation Equipment, (4) Electrical Products, (5) Non-metallic Mineral Products, and (6) Chemicals and Chemical Products, and (7) Petroleum and Coal Products are changed only slightly and can be considered fairly comparable with the same inventory and shipments data in the unrevised classification. Three other industry groups, (8) Primary Metal, (9) Metal Fabricating, and (10) Machinery are new groupings and do not compare with any grouping in the old classification. The other industry group shown, (11) Wood, diverges from the same series in the old classification as it excludes the furniture industry.

The published figures will be subject to revision early in 1964 due to the introduction of a revised list of establishments to the new classification.

Implementation of Classification Systems

One of the purposes of a standard classification system is to provide for greater integration and comparability of economic data, a purpose which will be best served when the classification system is completely implemented. At the present time, most industrial statistics are classified according to the Standard Industrial Classification developed in 1948. A revised Standard Industrial Classification has been developed and is gradually being introduced to various series of the Bureau. Besides shipments and inventories as above, security price indexes (Table 100) and corpora-

tion profits (Table 99) were published earlier in the Review utilizing in part the new classification. Other manufacturing series in the Review are still on the 1948 classification basis, such as industrial production (Table 11), industrial manufacturing employment (Table 19), average weekly wages and salaries (Table 22), average hourly earnings (Table 25), and average hours worked (Table 26). Important differences may arise from comparisons between the two classification systems, and this note is intended to warn the user of this difficulty.

A standard commodity classification system has also been developed in the Bureau. The first series to be published on this basis in the Review were commodity exports (Table 82) which appeared in the September issue.

The May, June and July 1961 issues of the Review carried articles describing the revised Standard Industrial Classification and the Standard Commodity Classification. The user should refer to these publications to obtain more detailed information on the classification systems and on problems being faced in their implementation. These articles have also been reprinted in "Selected Articles on DBS Statistical Activities", Catalogue No. 13-518.

Publication of an Additional Table

Table 10A, giving the source and disposition of national saving is being added to the section on National Accounts (Tables 6-10). The table contains both the unadjusted and seasonally adjusted data. The left hand side of the table gives the sources of national saving, or the contribution of the personal, business and government sectors of the economy to total saving. The right hand side gives the disposition of national saving in gross fixed capital formation, change in inventories, and the net foreign balance. For greater convenience to the user, the residual error is given on both sides of the table.

Annual Subscription: \$5.00 — Single copy: 50c.

This review and other publications of the Dominion Bureau of Statistics, including a free annotated catalogue of current publications, may be ordered from the Information Services Division, Dominion Bureau of Statistics, Ottawa, Ontario, and remittances made payable to the Receiver General of Canada.

THE 1961 INPUT-OUTPUT TABLE

This article presents tentative plans for the construction of a 1961 Canadian input-output table in the Central Research and Development Staff of the Dominion Bureau of Statistics. It is hoped that persons interested in input-output accounting and analysis will comment on the proposed plans and thus assist the Bureau in ensuring that the 1961 Table will satisfy as wide a variety of requirements as possible. Many of the basic principles and more technical aspects of the subject cannot be discussed here; the reader is referred to an earlier Bureau publication¹ should he wish to pursue the topic further.

Background

Tables of the inter-industry flow of goods and services, more commonly known as input-output tables, have been compiled by over forty countries. Considered in many countries to be an extension of the system of National Accounts, they have become a standard framework for the expression of transactions arising from economic production. They have also been used widely for forecasting and for analysing the structure of an economy in considerable detail. In some countries such studies have provided a partial basis for policy decisions.

The Dominion Bureau of Statistics has constructed a Canadian input-output table for the year 1949.² The 1949 table was experimental; an important objective was to test the adequacy of the available bodies of data for making input-output table compilations. The 1949 experiment proved relatively successful although important gaps and inconsistencies in the data were spotlighted in the process.

The period between completion of the 1949 table and the present was essentially one of consolidation and planning. On the one hand, a number of analytical studies based on the 1949 table were carried out in a private project with the co-operation of Dominion Bureau of Statistics staff. As a by-product, these studies served to indicate some of the features required in future Canadian input-output tables to make them more useful for economic analysis over an extended number of years. On the other hand, the Dominion Bureau of Statistics used the knowledge acquired in constructing the 1949 table to promote the integration of economic statistics collected by its various divisions.

As a result of these activities, it was concluded that the construction of input-output tables in Canada is warranted if only for the role that they

can play in furthering the integration of economic statistics within the conceptual framework of an extended system of National Accounts.³ At the same time, the demands of various research groups for Canadian input-output tables to be used in economic analysis have been growing, and in compiling the 1961 Table, the requirements for such purposes must be anticipated for a considerable period into the future. As a result, a primary objective is to maintain the maximum possible detail and flexibility of arrangement within the limit of available resources.

Structure of the 1961 Table

To assist in an explanation of the structure of the 1961 Table, the general accounting framework is set out in Figure I.

This basic arrangement is more or less standard for input-output tables. The row for any one of the industries 1, 2, 3, ... n shows, in value terms, the disposition of the total output of that industry. Part of the total output goes to each of the industry groups 1, 2, 3, ... n for further transformation in the production process (intermediate output, in the upper left portion of the table) and part goes to final expenditure of the four National Accounts sectors (final output, in the upper right portion of the table). The column for an industry shows, in value terms, the origin of total inputs into the industry. Inputs of intermediate products from each of the industries 1, 2, 3, ... n (intermediate input) are shown in the upper left portion of the table. Components shown in the lower left portion of the table will be referred to as primary inputs. These consist of: the use of imported goods and services; indirect taxes on all goods and services used; the gross domestic product originating in the industry, the components of which are wages, salaries and supplementary labour income, corporation profits before taxes and other investment income, net income of unincorporated business, and capital consumption allowances and valuation adjustments.

For each industry, total output is equal to total input, the balancing item being profit or loss on operations which forms part of gross domestic product. Therefore, for all industries combined, the sum of total outputs equals the sum of total inputs and the sum of final outputs (total less intermediate) equals the sum of primary inputs (total less intermediate). This latter equality is analogous to the equality of the expenditure and income sides of the National Accounts. Entries in the lower right portion of the table are, at the same time, part of final expenditure and of primary inputs so that their inclusion does not disturb this equality.

^{1,2} DBS Cat. No. 13-513, *Supplement to the Inter-Industry Flow of Goods and Services, Canada, 1949* (Ottawa: Queen's Printer, 1960) which contains a revised 1949 table at producers' prices, an inverse matrix, and all of the relevant sources and methods.

³ For a description of the conceptual framework of the Canadian National Accounts, see DBS Cat. No. 13-502, *National Accounts, Income and Expenditure, 1926-1956* (Ottawa: Queen's Printer, 1958).

	Net income of unincorporated business											
	Capital consumption allowances and valuation adjustments											
Total												

It is the upper left portion of the table in the form of a square ($n \times n$) matrix which is the special feature of the input-output table. Each entry is, at the same time, an output of one industry and an input of another.⁴ The matrix therefore describes the inter-industry flow of those products which, being intermediate, do not appear in the National Accounts proper.

Sectors and Industries

As is well known, the National Accounts divide the economy into four sectors—business, government, personal and non-resident. These distinctions are retained in the input-output table. The unique contribution of the input-output table is to provide an industrial breakdown of the expenditure and income portions of the sector accounts and of the flows of intermediate goods and services. The industries which appear in the 1961 Table will follow the new (1960) Standard Industrial Classification of the Dominion Bureau of Statistics;⁵ in some cases these will represent individual industries of the Standard Industrial Classification at the so-called three-digit level, and in other cases groupings of such industries.

The Standard Industrial Classification is a system of classifying accounting units, referred to as establishments, into industries, each industry being designated by a code number.⁶ This classification applies to the whole economy, including the personal and government sectors as well as the business sector. Some industries include establishments of a type not found in the business sector—for example, churches and synagogues, which form part of the personal sector, are classified to Industry 831—Religious Organizations. Certain industries have establishments in the business sector and in one or both of the government and personal sectors—for example, hospitals, which occur in all three sectors, are classified to Industry 821—Hospitals.

This creates a problem of arrangement in the input-output accounting framework. From one point of view all establishments should be shown under a single industry heading no matter what sector they belong to. From another point of view, it is an advantage to show separately the establishments belonging to the personal and government sectors.

In the 1961 Table, the left portion (Figure I) will be confined to the business sector; current account expenditures by establishments in the

government and personal sectors will be included in the relevant final demand columns.⁷ However, to the extent that the data permit, the columns will be sub-divided to show separately the important industries of these sectors. This will permit the user to transfer columns from the final expenditure portion to the intermediate portion of the Table to suit his particular analysis; he may, for example, choose to transfer columns which have industrial counterparts in the business sector.

The objective in presenting the data in the manner described is not the specification of a rigid conceptual framework with respect to industries and sectors, but the achievement of flexibility of arrangement for the user.

Industries and the Unit of Classification

It bears repeating that the Standard Industrial Classification is a classification of establishments; it is not a classification of commodities or of activities. "For statistical purposes, the 'establishment' is defined as the smallest unit which is a separate operating entity capable of reporting all elements of basic industrial statistics. This means that for purposes of industrial surveys data are gathered from the most homogeneous units that maintain accounts which permit them to report on their main elements of input and output".⁸

Typically the establishment is the mine in mining, the plant in manufacturing, the store in retail trade, etc. The establishment should be distinguished from the firm, which is the legal entity. The majority of firms have only one establishment, but many firms, particularly the larger ones, have more than one establishment. In the case of the multi-establishment firm, the establishments might all be classified to the same three-digit industry or they might be classified to different three-digit industries.

An industry is comprised of establishments which are **primarily** engaged in a particular activity such as the manufacture of clothing. However, a clothing manufacturing establishment might also manufacture other commodities, such as bed sheets, and engage in non-manufacturing activities, such as the trading in goods not of own manufacture.

In the annual Census of Manufactures prior to 1961, an attempt was made to confine compilation of the data to the manufacturing activity of the establishments. This resulted in many inconsistencies because the input information on process supplies, fuel, labour, etc. often could be reported by the respondent on a total activity basis only.

⁴ An entry on the principal diagonal is an input into an industry from the same industry, and is referred to as "intra-industry consumption".

⁵ DBS Cat. No. 12-501, *Standard Industrial Classification Manual* (Ottawa: Queen's Printer, 1960).

⁶ The *Standard Industrial Classification* distinguishes 140 manufacturing and 154 non-manufacturing industries coded at the three-digit level.

⁷ This is in contrast to the 1949 table, in which certain industries in the personal sector and all industries in the government sector were combined with a large section of the service industries in the business sector to form industry no. 42, "Service Industries", in the intermediate portion of the table.

⁸ DBS Cat. No. 12-501, p. 8.

Starting in 1961, information on the non-manufacturing activities of the manufacturing establishment has been collected and processed systematically, so that both input data and output data refer consistently to the total range of operations of the establishment. The ultimate objective is to implement the new establishment definition of the revised (1960) Standard Industrial Classification in all surveys dealing with industry statistics on an establishment basis. Its use, in conjunction with a standard register of establishments, will eliminate gaps and overlaps and facilitate comparability of data from different industrial surveys.

The new establishment definition has been implemented in surveys covering some non-manufacturing segments of the economy; important here is the 1961 decennial Census of Merchandising and Services. For other areas, the data are largely on an activity basis. Where the data permit, the 1961 Table will follow the total activity concept of the Standard Industrial Classification.

The Valuation and Routing of Commodities and Services

Input-output tables show the values of the flow of goods and services between producers and users. These values can be measured in two basically different ways: (i) at the values received by producers from the sale of their goods and services, usually referred to as "producers' values" or as values at "producers' prices"; (ii) at the values paid by the users in the purchase of goods and services, usually referred to as "purchasers' values" or as values at "purchasers' prices". While in certain instances the purchaser's value is equal to the producer's value, it is often the case that the purchaser's value exceeds the producer's value, particularly where commodities are concerned. The difference is composed mainly of the charges of transportation establishments and the margins of trading establishments involved in conveying the goods from producer to user.

The level of valuation in the basic 1961 Table will be the producer's value of the commodity or service excluding any indirect taxes. The producer's value of a product is defined as the value f.o.b. the producing establishment, that is, the value at the point where the product crosses the producing establishment's boundary.

For an establishment which has its own means of transport for carrying its products, this boundary is now considered to extend to the point where the product leaves the captive transporting vehicle, and the transporting activity to that point is simply an internal operation of the establishment. The transportation "industry" in the Table will include all transportation establishments which operate on a "for hire" basis, plus that portion of transportation activity which in fact forms part of the establishments of other industries, but which has not been included as such in their data.

A standard procedure in the compilation of input-output tables, that of short-circuiting the wholesale and retail trading industries in order to show the direct link between the user and the producer of a commodity, will be employed. By this technique, a commodity passing through trade on its way to a final or intermediate user is not deemed to have originated with the trading industry, but with the last processing industry. The gross output of trading activity is equated to the gross margin on the commodities handled.

Some products appear as outputs in more than one industry. This problem of multiple sources of domestic supply, sometimes referred to as the "primary-secondary products" problem, plagues all compilers of input-output tables and several methods of handling it have been devised in various countries. The special use of the terms "primary" and "secondary", and the routing technique to be adopted in the 1961 Table are best explained by a hypothetical example:

Suppose that Agriculture uses a certain quantity of wooden baskets. Any establishment which is primarily engaged in the manufacture of wooden baskets is classified to Wooden Box Factories, and most of the domestic production originates in this industry (wooden baskets are a "primary product" of Wooden Box Factories). Some establishments classified to Sawmills, in addition to their regular products, manufacture a small quantity of wooden baskets (wooden baskets are a "secondary product" of Sawmills). Separate estimates would then be made for the input into Agriculture of wooden baskets from Wooden Box Factories and from Sawmills. This means that all of an industry's commodity output, both "primary" and "secondary", will be distributed along the row for that industry.⁹

In the basic Table, imports will be shown in a single row by the using industry or final demand category. If in the example cited, there are some imports of wooden baskets, then a separate estimate would be made for the imported portion of wooden baskets used by Agriculture.

Special treatment will be afforded certain other "secondary" activities of which force-account construction deserves mention.

Tentative plans call for force-account new and repair construction in all industries to be split off from their other activities and incorporated with the Construction Industry, which will then include all construction activity. This procedure, which contravenes the (1960) Standard Industrial Classification definitions, is considered necessary because

⁹ Methods of handling the problem in other countries usually involve either the re-routing of "secondary products", or the transfer of the "secondary products" with the associated inputs, from the producing industries to the industries to which the products are "primary". Each technique has certain advantages and disadvantages. The choice depends largely upon the principal uses to be made of the table and sometimes on the form in which the data are available.

there is no detail on the construction materials used by any industry. It is possible to construct much of the input column for total construction activity by identifying those products and imports which are construction materials and routing them into the Construction Industry. Estimates of the labour and other inputs associated with force-account construction would, of course, be transferred to the Construction Industry under this method.

Grouping of Industries

The 1949 table grouped the industries of the 1948 Standard Industrial Classification into forty-two input-output industries; of these, thirty were in manufacturing.

It is expected that the 1961 Table will have roughly sixty industry groups, with somewhat over forty of these in manufacturing, but this estimate is subject to considerable change. Although construction of the Table is now under way, a working aggregation of industries in the (1960) Standard Industrial Classification has yet to be made. The objective is to carry three-digit industry detail for most commodity producing industries as far as possible on the worksheets before adopting an input-output grouping. There are three principal reasons for this approach: projects in other Dominion Bureau of Statistics divisions which rely on information contained in the input-output worksheets will require the extra detail; a decision on the final grouping should be based on knowledge acquired from an initial processing of the data in considerable detail; in the years following completion of the Table, there are bound to be requests for special studies, but their precise nature cannot be anticipated. The extra detail in the early stages of the worksheets will make some of these projects feasible and greatly simplify the work involved.

In choosing the final input-output industry groupings, many criteria must be weighed. Some of those which call for extra detail, most of them related to the needs for economic analysis, are:

- (i) The separation of industries with distinctly different input structures, including differences in import requirements.¹⁰
- (ii) The isolation of "growth" industries.
- (iii) The distinction between primary (in the sense of basic) manufacturing industries and secondary manufacturing industries.
- (iv) The maintenance of detail for industries with respect to the principal use of their final products — e.g., producers of consumer

¹⁰ In input-output analysis, the input structure for an industry usually takes the form of a column of input coefficients, the values of which are assumed to remain stable. Input coefficients based on the average relationships existing in the year of the input-output table would be determined by dividing each of the values in an industry's column by the value of total output for that industry.

durables, of consumer non-durables, of producers' durables, of export goods.

- (v) Reconciliation with the 1949 table — the Dominion Bureau of Statistics does not plan to carry this out, but other researchers will most likely be interested in such a study.

Criteria calling for combinations of industries include:

- (i) The over-riding limitation imposed by resources available for constructing the Table.
- (ii) Limitations in available data — an important point here is that the data on profits and other investment income are compiled for industry groupings that are combinations of three-digit Standard Industrial Classification industries.
- (iii) Where a particular commodity is produced in more than one three-digit industry, the grouping of the industries involved results in the total domestic supply originating in just one input-output industry. Consequently, there is no "secondary production" of the commodity in terms of the adopted industry grouping. Such groupings eliminate the arbitrariness of certain allocations that would be required in keeping the industries separate. Further, they simplify the interpretation and use of a table by creating a closer correspondence between industries and the products which are ordinarily associated with them.

Aggregations which satisfy one criterion will conflict with others, so that compromises will be necessary to achieve a grouping that is manageable for the later worksheet stages.

Supplementary Import Studies

The setting out of imports in a single row by using industry or final demand category provides valuable information on the structure of the economy but leaves some vital questions unanswered. What kinds of imports are being used? Are they similar to goods and services that are domestically produced? What is the input structure of an industry in terms of its total use of goods and services, irrespective of whether they are produced domestically or imported?

These questions and others can be answered by sub-dividing the import row into $(n+1)$ rows in order to show imports classified by the domestic industry with which they compete (defined as the domestic industry which is the "primary" producer of the similar product); one row is for non-competitive imports, that is, imports of a kind not produced domestically.

Experience gained from the construction of such a matrix for 1949 (unpublished) indicates that,

despite definitional and data problems, the project is most worthwhile. It is particularly important for achieving flexibility in the treatment of foreign trade in input-output analytical models.¹¹

A study of competitive imports of this type will be made for 1961, although initiation of the project might have to await completion and publication of the basic Table.

To provide further information on the patterns of Canada's foreign trade, competitive imports will be cross-classified by countries of origin. The breakdown, subject to adjustment, will be: United States; United Kingdom; European Economic Community; Other Western Europe; Rest of the World. This classification will be applied to total competitive imports, to the combined use of competitive imports by all industries, and to competitive imports flowing directly to final demand categories.

Detail in Final Expenditure Categories

The column for exports, which shows their industry of origin, will be sub-divided to show countries of destination, the country grouping being identical to that for imports.

An attempt will be made to provide detail on government expenditure by level of government, although it may not prove feasible to separate local and provincial governments. Wherever possible the expenditure column for each level of government will be sub-divided by industry as explained above.

Expenditure by households in the personal sector will initially be sub-divided into durable goods, non-durable goods, and services. The two broad commodity classes will likely be broken down further by commodity groups corresponding to National Accounts categories.

The column for Business Gross Fixed Capital Formation shows the industry of origin of new reproducible fixed assets acquired by all industries in the business sector. The distinction between new construction and new machinery and equipment can readily be made, but it is unlikely that these can be sub-divided to show the investment made by each industry.

An entry in the column labelled Value of Physical Change in Inventories shows the inventory change of the products of the industry in the relevant row, regardless of where the inventories are held in the business sector. No breakdown of the inventory column is contemplated.

Procedures in Commodity-Flow and Service-Flow Studies

The procedure to be followed in constructing the 1961 Table will be to carry out commodity-flow

and service-flow studies. The amount of information available for this purpose is far from uniform across industries and categories of goods and services. A brief inventory of sources of information may prove useful.

The annual Census of Manufactures collects detail on products shipped and on materials, fuel, and electricity used by manufacturing establishments. A special survey on containers used in manufacturing in 1962 has been conducted by the input-output staff and will be used to estimate the 1961 detail.

Information in varying degrees of detail is available on the products shipped by primary industries (Agriculture, Forestry, Fishing and Trapping, Mining). Less is known about the commodity inputs of these industries. Some detail is available for Agriculture through the 1958 Farm Survey and for Mining from several sources.

Of the service industries, Trade and certain portions of the Community, Business and Personal Service Industries were covered in the 1961 decennial Census of Merchandising and Services, where detail on revenue and some input information was obtained. For other service industries (Transportation; Communication and Other Utilities; Finance, Insurance and Real Estate; those portions of the Community, Business and Personal Service industries not covered by the Census) information is available from a considerable number of Dominion Bureau of Statistics surveys and from some outside sources. In general there is little available on commodity inputs of these industries, while some detail is collected on the service inputs for certain service industries.

It will probably be necessary to supplement the available information on service inputs into manufacturing and some other industries with a special sample survey.

The commodity-flow studies will proceed as follows:

- (i) Each bit of detailed information on the sources and uses of commodities will be recorded on a card. The sources are imports, and outputs of the commodity producing industries; the uses are exports, commodities used in manufacturing, and certain commodities used in several other industries. (For example, on one card, it will be shown that 436,113 lbs., valued at \$10,558, of 100 per cent sulphuric acid were used by Sugar Refineries—Standard Industrial Classification code 133). It is estimated that there will be over 20,000 of these source and use cards.
- (ii) Each card will be classified at the three-digit, or commodity group level of the Standard Commodity Classification.¹²

¹¹ See T.I. Matuszewski, P.R. Pitts and J.A. Sawyer, "Alternative Treatments of Imports in Input-Output Models: A Canadian Study" *Journal of the Royal Statistical Society, Series A*, No. 3, 1963 (forthcoming).

¹² DBS Cat. No. 12-502, *Standard Commodity Classification Manual, Vol. I: The Classification* (Ottawa: Queen's Printer, 1959).

(The Standard Commodity Classification contains approximately 500 commodity groups). The cards will then be regrouped by the Standard Commodity Classification.

- (iii) The detail contained on the cards in a particular commodity group will be transcribed onto a worksheet, the sources being listed in the worksheet stub and the uses along the column headings.
- (iv) Allocation of exports to their sources of supply will be made on the worksheet, and the balances of domestic outputs available for domestic use calculated.
- (v) Commodities recorded as being used by industries will then be allocated to their sources of supply. The values of commodities used are at purchasers' prices and must be broken down into producers' value (or import value f.o.b. country of origin), transportation and storage costs, trade margins, and indirect taxes.

The balances of domestic and imported supplies remaining after these allocations will then represent inputs into construction, inputs into other industries for which detail on use is not satisfactory, purchases by government, inventory changes, flows to business fixed capital formation (machinery and equipment) and flows to personal consumption.

An extensive study of government purchases, based mainly on the public accounts of the various governments, will be carried out. The final estimates will be in terms of commodity groups which in many instances will be more aggregated than the three-digit level of the Standard Commodity Classification. The introduction of these estimates into the commodity flow studies will therefore require considerable regrouping of the worksheets to form broader commodity classes.

Estimates of commodity inputs for the remaining industries will be made on the basis of the nature of commodities still available for domestic use after the allocations made to that point, in conjunction with any pieces of information available on commodities actually used by those industries. Special studies to establish the content and sources of inventory change and of business expenditure on new machinery and equipment will be made.

Deduction of all of these uses from the available sources of supply then leaves the producers' values of commodities which are deemed to flow to personal consumption. A very considerable study will then be required in order to trace these goods through the channels of distribution to the final consumer. In the course of this project, estimates of import duties, sales and excise taxes, transportation and storage costs, and wholesale and retail trade margins that apply to consumer goods will be built up by commodity classes for each industry of origin and for imports.

While broader commodity groupings will be adopted at some points, the precise timing and nature of these groupings must be based on the experience gained in handling the data. It is hoped that detail on some important individual commodities can be maintained throughout so that breakdowns of some rows in terms of commodity content may be provided in supplementary tables.

A procedure similar in concept, but much less complicated in fact, will be employed to yield estimates of the disposition of services.

Estimation of Gross Domestic Product Originating by Industry

Labour income data should be available to the input-output staff in a form requiring relatively little adjustment.

The one extensive project in building up this section of the Table is the estimation of corporate profits and other investment income on an establishment basis. The primary source of data is **Taxation Statistics**¹³ where corporate investment income is reported on a firm basis. The principal difficulty here is the multi-industry firm, that is, the firm which has establishments in two or more input-output industry groups. For such a firm, a split of depreciation, profits, and other investment income must be made in line with the classification of its establishments to different input-output industries.

Some Contributions to Statistical Integration

Worksheets of the 1961 input-output Table will provide a vast amount of detailed information which will contribute to the next historical revision of the National Accounts, to be carried out by the National Accounts and Balance of Payments Division on the basis of benchmark information from the 1961 Censuses.

The input-output study of gross domestic product originating by industry for 1961 will be the starting point for more detailed estimates of this type to be made by the Real Output Section in its eventual conversion to a 1961 weighting system from the currently used 1949 base.¹⁴

Detail from the input-output commodity-flow worksheets, when available, will allow the planned development of "net" Industry Selling Price Indexes¹⁵ to go forward. The use of "net" weights (whereby intra-industry shipments for the chosen industry groupings are excluded) permits aggregation

¹³ Department of National Revenue, *Taxation Statistics* (Ottawa: Queen's Printer, annual).

¹⁴ See DBS Cat. No. 61-502, *Revised Index of Industrial Production, 1935-1957* (Ottawa: Queen's Printer, 1959) and DBS Cat. No. 61-505, *Indexes of Real Domestic Product by Industry of Origin, 1935-1961* (Ottawa: Queen's Printer, 1963).

¹⁵ DBS Cat. No. 62-515, *Industry Selling Price Indexes, 1956-1959* (Ottawa: Queen's Printer, 1961), p. 9.

of industry indexes, unlike the existing "gross shipments" weightingsystem.

Work to date on the Table has already proved its value in testing the consistency of data provided by the Census of Manufactures following implementation of the new Standard Industrial Classification establishment definition. It is expected that experience gained in fitting data for all industries into a consistent framework will allow the input-output staff to provide some advice to the divisions of the Dominion Bureau of Statistics on implementing the Standard Industrial Classification definitions in areas where this has not yet been attempted.

The carrying out of commodity-flow studies using the Standard Commodity Classification will have two important by-products: it will test the degree to which commodity detail is commensurate

across the complete range of Dominion Bureau of Statistics commodity statistics; it will also facilitate the systematic implementation of the Standard Commodity Classification in the Census of Industry by bringing together, for a particular commodity group, all the available detail on shipments and commodities used.

Time Schedule

Processing of 1961 data by the input-output staff began in May, 1963. Current plans call for completion of worksheet estimates of the basic Table by mid-1966, resources permitting, with publication as soon as possible thereafter. This may be followed by the publication of import and other supplementary studies relating to the 1961 inter-industry project.

Note: Reprints of this article are available on request.

INDUSTRIAL PRODUCTION (More detail in Table 11)

The index of industrial production advanced by 1.2 per cent in August, with both manufacturing and mining recovering most of the ground lost in July.

	total industrial production	manufacturing production			mining production	electricity and gas	total iron and steel
		total	durables	non-durables

CONSTRUCTION (More detail in Tables 60, 64 and 65)

Value of building permits increased in August in the non-residential sector and declined in the residential sector leaving the total value about unchanged.

Total housing starts showed a slight increase in September while total completions declined.

	value of building permits			new dwelling construction, centres 5,000 and over ¹

¹Starting in January 1962, the data are not entirely comparable with earlier years because more centers are included and because of the expansion of the boundaries of metropolitan areas. This is based on information from the 1961 census.

MANUFACTURING INVENTORIES, SHIPMENTS, ORDERS (More detail in Tables 36 and 37)

Manufacturing shipments and new orders declined in August; unfilled orders advanced and inventories showed virtually no change.

all industries

	owned inventories	shipments	new orders	unfilled orders	new orders machinery	new orders construction goods	shipments primary iron and steel	ratio of inventories to shipments

¹Prior to the census in 1961, population estimates were made quarterly on March 1, June 1, September 1 and December 1, and in addition on July 1 and January 1 of each year. After the 1961 census the quarterly estimates will be made on January 1, April 1, July 1 and October 1, as well as June 1. Source: Estimated population of Canada by provinces at June 1, 1962 (91-201) D.B.S.

¹Includes change in farm inventories. The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for withdrawals of grain from farm stocks and the change in livestock items. Because of arbitrary elements, too precise an interpretation should not be given to the series. ²Includes residual error of estimate. Source at bottom of Table 10A.

¹The data in Tables 17 to 26 are based on reports from employers usually employing 15 persons and over and covering the respondents last pay period(s) in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. ²Excludes agriculture, fishing, trapping and domestic service. ³Includes storage and communication. ⁴Includes insurance and real estate. ⁵Excludes public administration and defence and such community services as health and education. Source: Employment and Payrolls, (72-002), D.B.S.

¹This index is composed of shelter and household operation.²This index is available for January, April and August only.³Total of commodities and

services does not add up to 100 per cent; portion of shelter which includes taxes and mortgage interest, and amounts to 8 per cent, is excluded.

¹Monthly shipments represent an estimated projection of the latest available census of manufacturer's values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. ²Total inventories owned by manufacturers including warehouse stocks. Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D.B.S.

¹Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. ²Total manufacturing inventory owned by manufacturers including warehouse stocks. ³Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. ⁴End of period. Annual figures for inventories and unfilled orders are end of December values.

¹Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp.
²Rough cords of 128 cu. ft. ³Customs exports. ⁴Mill shipments destined for export. Sources: Pulpwood Production (25-001), Trade of Canada, Exports (65-004), D.B.S., Bulletins of Canadian Pulp and Paper Association and Newsprint Association of Canada.

¹Data on shipments relate to rolling mills products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. ²Excluding shipments for re-processing at maker's own plants. ³Imports include, in addition to all other shapes, ingots, cast iron pipe, wire and wire ropes. Imports exclude castings (except cast iron pipe), forgings, fittings and couplings. Source: Primary Iron and Steel (41-001), D.B.S.

¹Data refers to city proper for Port Arthur, Fort William, Regina and Saskatoon; in other cases to metropolitan area.

collected for 1,100 municipalities and individual figures are available on request.

Some of the annual totals for 1961 and 1962 differ slightly from the sum of the twelve monthly totals, due to the addition of statistics received too late to be included in the monthly data.

¹The coverage was extended to 507 municipalities in 1948, and as of 1961, stands at 1,100, minor revision still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation.

¹A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All Metropolitan Areas and Urban Centres with a population of 5,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. ²End of period. Source: New Residential Construction (64-002), D.B.S.

¹Footnote and Source are at Bottom of Table 63. ²Starting in January 1962, the data are not entirely comparable with earlier years because more centres are included and because of the expansion of the boundaries of metropolitan areas. This is based on information from the 1961 census.

*See also Table 31.

¹Excluding Newfoundland. Western grain prices used in the construction of the Index prior to August 1, 1962 are final prices. From August 1, 1962 to date, the western grain prices used in the index are initial prices only for wheat, oats and barley. ²Includes subsidy on hogs. ³Based on price for hogs including Dominion premium up to September 1960. A rise in ratio favours production of beef. ⁴Previous to January, 1958, quotations referred to steers up to 1,000 lbs. Now they refer to all weights.

¹Overseas clearances plus U.S. imports for domestic use compiled from returns of Canadian elevator licensees and advice from American grain correspondents. Revised to include bagged seed wheat previously excluded. ²Customs exports are adjusted to reflect actual physical movement of wheat and wheat flour from Canada. Data shown for the last three months are not so adjusted. ³Annual data are monthly averages of crop year. ⁴Includes eggs for hatching. Sources: Coarse Grains Quarterly (22-001), Wheat Review (22-005), and Trade of Canada, Exports (65-004), D.B.S.

¹Total retail trade obtained by summing "By Kinds of Business". The sum of the seasonally adjusted retail trade by regions will not necessarily add up to this total. ²Includes sales of new and used cars, trucks and buses, repair parts and services, tires and tubes, storage batteries, gasoline, some farm implements and a small amount of wholesale trade.

¹Short term loans outstanding extended mainly but not entirely to consumers and for other non-business purposes, by selected financial institutions. The table does not include loans of trust and loan companies, second mortgage loans on residential real estate and loans of some other financial institutions for which comparable data are not available. ²Conditional sale agreements held in connection with the financing of retail purchases of consumer goods. ³Companies licensed under the Small Loans Act. Cash loans have no conditional sales contract but are usually repaid in instalments. ⁴Excluded from the above tabulation are charge accounts of motor vehicle dealers whose credit is extended mainly to businesses rather than to consumers. Instalment credit includes conditional sales agreements only. ⁵Amount owing to oil companies, excluding commercial accounts. ⁶Includes loans fully secured by marketable bonds and stocks, home improvement loans, etc. Excludes loans to finance purchase of Canada Savings Bonds. ⁷Figures for dates other than year ends are estimated on the basis of the loans by twelve companies. ¹Data in this table refer to railways with annual operating revenues of \$500,000 or over. Monthly averages for 1961 and 1962 differ from the sum of the monthly data due to revisions which cannot be allocated by months. ²Includes January to July interim payments related to recommendations of the Royal Commission on Railway Transportation.

¹Revised series with coverage limited to business failures under the Bankruptcy and Winding Up Acts, excluding individuals not operating businesses as such. ²In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements made under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available. ¹Note Circulation of Bank of Canada and chartered banks, excluding notes held by chartered banks. ²Subsidiary coin issued by the Mint less coin held by Bank of Canada and chartered banks in Canada. ³Less total float, i.e. cheques and other items in transit (net). ⁴At September 30, 1957, the deposit balances of religious, educational and welfare institutions used for business purposes, about \$140 million, were reclassified from "personal savings deposits" to "other notice deposits". The figures prior to September 30, 1957 are thus not comparable with those since that date. Source: Statistical Summary of Bank of Canada.

Note: This series gives total new settled-for ordinary insurance sales in Canada, exclusive of revivals, increases, dividend additions, reinsurance acquired and pension bonds without insurance. Totals are estimates projected from the sales reported by 32 companies operating in Canada representing 89 per cent of new ordinary insurance sales. ¹The Canada totals by months for 1961 and 1962 do not correspond to the sum of the provincial totals as revisions applied to the national total are not yet available for the provinces. Neither the monthly figures for 1961 and 1962 nor the monthly averages for 1962 have been revised to agree with the Canada total. Note: — The definition of profits before taxes is based mainly on the accounting definitions used by corporations. However, depletion charges are added back to net profits while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all companies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by a sample of all companies incorporated in Canada (Excluding government-owned companies and incorporated co-operatives). ¹Includes Tobacco, Leather and Miscellaneous Manufacturing Industries. ²Includes Electric Power, Gas and Water Utilities. ³Includes Community, Business and Personal Service Industries. ⁴Includes Agriculture, Forestry, Fishing and Construction. Source: Corporation Profits (61-003), D.B.S.

A NOTE TO USERS

Back records:

The following back records, raw and seasonally adjusted, are available on request from the Current Business Indicators Section, National Accounts and Balance of Payments Division, D.B.S.

- (1) The series on shipments, new orders, and inventories broken down into raw materials, goods in process and finished products as in Table 37 from 1952 to date.
- (2) The series on building permits by types (Table 58) namely industrial, commercial, institutional and government permits are available from 1948 to date.
- (3) The series on merchandise exports and imports in table 84 for the European Common Market, European Free Trade Association and the O.E.C.D. countries from 1946 to date.
- (4) Employment indexes from 1949 to date for the following series in table 17: industrial composite, forestry, public utilities and finance.
- (5) Labour income by provinces, as in table 12, is available from 1947 to date.
- (6) All retail trade series from 1947 to 1962 as in table 76.

Annual Subscription: \$5.00 — Single copy: 50c.

This review and other publications of the Dominion Bureau of Statistics, including a free annotated catalogue of current publications, may be ordered from the Information and Public Relations Division, Dominion Bureau of Statistics, Ottawa, Ontario, and remittances made payable to the Receiver General of Canada.

2204-501

SOME COMMENTS ON THE SURVEY OF FARM EXPENDITURES AND INCOME¹

Introduction

In 1958 the Dominion Bureau of Statistics, in conjunction with the Canada Department of Agriculture and other agencies, conducted a comprehensive survey of farm expenditures and income in all provinces except Newfoundland. The last survey of this kind was conducted in 1938, and was limited to farm business and living expenditures. After 1941, the periodic Census of Agriculture provided data for a few principal items of farm expenditures. Detailed information classified by types of farms and farm families in various regions was lacking.

The specific purpose of the survey was to obtain up-to-date information for checking, improving and developing statistical series prepared by the Dominion Bureau of Statistics. Also, it was intended to provide basic data for research into the structure of Canadian agriculture.

The scope of the survey ranged through farm business expenditures, income from both farm and non-farm sources, and capital used in farming. In detail, the main objectives were:

(1) to estimate farm business expenditures and receipts from farming operations;

(2) to estimate the income received by farm operators and families from sources other than the operation of farms;

(3) to obtain data on the distribution of expenditures among commodities and services used by farm operators and their families;

(4) to determine the distribution of income among families by size and source of income.

Classification of Farms

In each province, samples of farms representing all farms and the operators and their families were chosen. Tabulation and analysis of the survey data relate to the following three principal groups of farms:

(1) **All holdings** included land holdings defined as farms according to the 1956 Census of Agriculture, viz., land holdings on which agricultural operations were carried out and which were (a) three or more acres in size, or (b) from one to three acres in size, and produced agricultural products valued at \$250 or more during the survey year.

(2) **Farms** were defined as those land holdings which were classified as farms according to the Standard Industrial Classification adopted by the Dominion Bureau of Statistics. Excluded are forestry holdings, other non-agricultural holdings, agricultural services holdings, and institutional farms. This group accounts for 97 per cent of all holdings.

(3) **Single-farm single-family farms** are own-account farms where farm income accrued entirely to one family which, in turn, received income from only one farm. This family may have received income from off-farm sources. This group excludes partnership farms, managed farms, and own-account farms operated by a family which received income from the operation of more than one farm (multiple-farm single-family farm), in addition to the land holdings excluded from the preceding group. Single-farm single-family farms account for 93 per cent of all holdings.

Families were classified according to the farm that they operated. Income from all sources received by the farm operator and his family is related to the three principal groups of holdings or farms described above. Managed and institutional farms are excluded from all groups because the operators (managers) of these farms are paid a salary, and do not receive entrepreneurial income. In this respect, they are like a hired worker rather than an own-account farm operator.

Sample Design

Random sets of systematic samples were drawn for each province. In the Maritime Provinces and British Columbia, the sampling units were area segments containing an average of eight farms. The area segments were selected from an ordered listing of rural area segments in which farms were enumerated in the 1951 Census of Agriculture. In the field, the enumerators identified and listed all farms in the sample segments, but completed questionnaires for only one out of two farms. Thus, each sample segment was sub-sampled at the rate of one-half.

For Quebec, Ontario and the Prairie Provinces, where boundaries of segments were more readily identifiable, smaller segments containing an average of four farms were obtained by splitting the eight-farm segments and selecting one of the two halves by random method. For a given sample size, selecting two four-farm segments for every eight-farm segment reduced the total sample variation because of the similarity among farms in local areas. In addition, two systematic samples of clusters of four farms were selected from a separate ordered listing of individual farms enumerated in the 1956 Census of Agriculture.

To reduce sampling error, a special list of large farms in each province was treated as a separate stratum. This list was derived from the 1956 Census of Agriculture, and complete enumeration of these farms was undertaken. Also, a 25 per cent sample of the Hutterite colonies in the Prairie Provinces was taken from a separate special listing. Farms in special lists were excluded from sample clusters and segments.

¹ Reprints of this article are available on request.

The allocation of the national sample among provinces was based on (a) the relative importance of the province in the national aggregate of farm expenditures with provision for maintenance of a minimum size of sample in the smaller provinces, and (b) a statistical calculation of the number of farm records required to yield estimates, for each province, for certain major items of expense, with a sampling error of 10 per cent or less.

Sample Allocation and Response

Table 1 shows the distribution of the various samples and special lists among provinces. Usable returns fell short of the expected total because of a larger than expected decline in number of farms, a small overlap between segments and clusters, and non-response.

TABLE 1. Allocation of Samples and Usable Returns-Farm Expenditure and Income Survey, 1958

Province	Selection (sampling units)			Expected total number of farms	Usable returns (farms)			
	Segment samples	Cluster samples	Large farms ¹		Segment samples	Cluster samples	Large farms ¹	Total

British Columbia	154	—	70	648	535	—	54	589
Canada.....	1,525	856	531	9,674	4,943	2,762	372	8,077

¹ Includes Hutterite colonies.

Table 2 shows that, for the combined samples, a usable record was obtained from almost 92 per cent of all farms eligible for enumeration in the survey. Only seven per cent of the respondents did not give information or could not be found at home. Response was lowest for the large farm sub-universe.

This was caused partly by (a) complexities in separating farm operations from non-farm operations in integrated enterprises, and (b) difficulties in securing detail from accounting records of large operations.

TABLE 2. Response to Farm Expenditure and Income Survey, Canada, 1958

Farms	Segment sample	Cluster sample	Large farm subuniverse	Combined samples
	per cent			
Not identified	0.9	1.8	—	1.2
No response	3.4	8.2		
Editing reject	0.8	0.7	25.7	7.1
Usable record	94.9	89.3	74.3	91.7
Total eligible	100.0	100.0	100.0	100.0

Sample Expansion

Basically, an estimate of the aggregate for each enumeration item was derived by weighting (or multiplying) the sample by the inverse of the effective sampling rate. Thus, if one out of fifty farms were enumerated, the sample total for an item multiplied by fifty would give an estimate of the aggregate of that item for all farms in the universe.

A weight, or expansion factor, was assigned to each usable farm record. This weight for each farm record was calculated, separately for each province, in three steps:

- (1) Initially, a weight of one was assigned to each farm record in both the segment and cluster samples. Records from segments which were subsampled in the field were assigned an initial weight of two to compensate for the subsampling rate of 50 per cent. Assuming that farms in a small area are similar in type and size, the initial weight of the usable farm records from each segment and cluster was increased, when necessary, to adjust for missing and non-usable records.
- (2) The weight of each farm record from the segment samples then was multiplied by the inverse of the sampling rate for all segment samples as a group; the weight of each record from the cluster samples was multiplied by the inverse of the sampling rate for all cluster samples.
- (3) Finally, the weight of each farm record from the segment samples was multiplied by the proportion of usable records from segments relative to the total usable records from segments and clusters; similarly, the weight of each record from the cluster samples was multiplied by the proportion of records from clusters relative to the total records.

Usable farm records from the special sample of Hutterite colonies and the list of large farms were assigned weights that were adjusted for non-response and unusable records within the respective groups. Thus, each farm record in the sample represented a specific number of the total farms within a province.

Survey Procedures

Survey procedures were planned to obtain high quality survey data and thus minimize non-sampling error. A highly detailed questionnaire, which had been tested in the field, facilitated enumeration and editing of data.

The field survey staff was large enough to complete most of the enumeration within five weeks. Survey crews consisted of one supervisor and seven enumerators. Enumerators with agricultural backgrounds were chosen and given intensive training for five days. Training took place on three levels. So-called master trainers, composed of members of the Dominion Bureau of Statistics and the Department of Agriculture, were instructed at a master training

school held in Ottawa. Two master trainers were assigned to each of five regional headquarters, located across Canada, to instruct field supervisors. The latter trained enumerators at convenient localities throughout the provinces. At each level of training, instruction covered general background, questionnaire content and survey techniques. Master trainers kept in touch with enumerator schools.

During the period of enumeration, supervisors assisted their enumerators and carried out a short editing routine to detect any obvious inconsistency or incompleteness in the schedules. Master trainers were available to advise and assist the supervisors when difficulties arose.

In Ottawa, the schedules were edited thoroughly, including internal consistency checks made possible by a system of supply and disposition balances built into the questionnaire. Finally, the data from individual schedules were prepared for processing by an electronic computer system in a form which provided for presentation of almost any configuration of data desired.

Reliability of Estimates

The reliability of the estimates is affected by two kinds of errors. First, sampling error reflects sampling efficiency and depends on the frequency of a characteristic, its variation among the population of farms and families, and the size of the sample. An objective measurement of sampling error was obtained by using appropriate statistical methods. For items occurring frequently and for aggregates of items, such as total receipts from various kinds of livestock, a sampling error of less than 10 per cent was associated with most estimates. Where characteristics occur infrequently, the sampling error can be very large.

Second, non-sampling error is connected with the accuracy of the information obtained. Great care was taken to reduce non-sampling error by high standards of enumeration. However, experience has shown that non-sampling errors are unavoidable. Farmers rarely keep accounts; memory bias regarding a year's transactions is likely. Physical data generally are more accurate than financial data. Income items tend to be biased downward and expenditure items upward. Independent series of estimates available in the Dominion Bureau of Statistics are not appropriate for comparison with the survey estimates because of differences in terms of reference.

As a result of the combined effects of sampling and non-sampling error, and coverage and concept differences, the survey expenditure total was about seven per cent above and the survey farm income about 15 per cent below the annual series produced by the Dominion Bureau of Statistics. No attempts have been made to determine separately the extent to which non-sampling error and difference in concept and coverage were responsible for divergence of the survey estimates from the official annual series of estimates.

Summary

The Dominion Bureau of Statistics sample survey of farm income and expenditure was undertaken to meet an urgent need for up-to-date detailed information on the financial position of farm businesses and farm families. Farmers included in the sample responded unexpectedly well. A sampling error of less than 10 per cent was associated with the survey estimates for most of the important single and aggregated items of income and expense.

Great care was taken to minimize non-sampling error by careful enumeration procedures. The effect of non-sampling error on the survey estimates has not been assessed precisely. However, there are indications that over-reporting of expenditures and under-reporting of income can be attributed partly to non-sampling error. Also, some divergence of the survey estimates from the official series of estimates was caused by differences in concept and coverage. In addition to providing data for improvement of existing Dominion Bureau of Statistics agricultural

series, the survey results supply for the first time detailed information on farm income, off-farm income, farm expenditure, farm capitalization and indebtedness, and the physical structure of farms. It is hoped that a comprehensive study of the structure of Canadian agriculture, based on the survey results, will be prepared to provide researchers with much invaluable and previously unavailable data. As yet, lack of resources has prevented the preparation of this report.¹ The survey data already may be obsolescent as a result of rapidly changing conditions in Canadian agriculture. They will, however, remain useful for measuring historical changes, providing similar surveys are conducted periodically in the future.

¹ The Dominion Bureau of Statistics has published a report outlining the history and procedure of the survey and showing various items of farm expenditures, receipts and capital by province and for Canada as a whole. See: *1958 Farm Survey Report, No. 1, Expenditures, Receipts and Farm Capital*, Catalogue No. 21-506, Occasional, Queen's Printer, Ottawa, \$1.00.

INDUSTRIAL PRODUCTION (More detail in Table 11)

The index of industrial production advanced by 1.4 per cent in September, to reach a new high, as all three major divisions of the index showed strength.

¹Gross National Product at market prices excluding accrued net income of farm operators from farm production. ²Before dividends paid to non-residents; see also footnotes on Table 99. ³Original data as in column 8, Table 80. ⁴Data for total housing starts and completions are not affected by the area changes mentioned in footnote 1, page S-5.

PRICES (More detail in Tables 28, 30, 31, 82, 83 and 100)

The indexes of thirty industrial materials and of industrial common stocks rose in October.

The consumer price index increased slightly in October; there were increases in durables, non-durables and services but a decline in the food index.

¹Prior to the census in 1961, population estimates were made quarterly on March 1, June 1, September 1 and December 1, and in addition on July 1 and January 1 of each year. After the 1961 census the quarterly estimates will be made on January 1, April 1, July 1 and October 1, as well as June 1. ¹Includes change in farm inventories. The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for withdrawals of grain from farm stocks and the change in livestock items. Because of arbitrary elements, too precise an interpretation should not be given to the series.

²Includes residual error of estimate. Source at bottom of Table 10A.

¹The data in Tables 17 to 26 are based on reports from employers usually employing 15 persons and over and covering the respondents' last pay period(s) in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. ²Excludes agriculture, fishing, trapping and domestic service. ³Includes storage and communication. ⁴Includes insurance and real estate. ⁵Excludes public administration and defence and such community services as health and education. Source: Employment and Payrolls, (72-002), D.B.S.

Table 18: employment¹ indexes, industrial composite, by provinces (1949 = 100)

¹Monthly shipments represent an estimated projection of the latest available census of manufacturer's values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. ²Total inventories owned by manufacturers including warehouse stocks. Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D.B.S.

Table 34: shipments in manufacturing², by economic use groups

¹Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. ²Total manufacturing inventory owned by manufacturers including warehouse stocks. ³Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. ⁴End of period. Annual figures for inventories and unfilled orders are end of December values. Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D.B.S.

¹Data on shipments relate to rolling mills products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. ²Excluding shipments for re-processing at maker's own plants. ³Imports include, in addition to all other shapes, ingots, cast iron pipe, wire and wire ropes. Imports exclude castings (except cast iron pipe), forgings, fittings and couplings. Source: Primary Iron and Steel (41-001), D.B.S.

¹A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All Metropolitan Areas and Urban Centres with a population of 5,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. ²End of period. Source: New Residential Construction (64-002), D.B.S.

¹Footnote and Source are at Bottom of Table 63. ²Starting in January 1962, the data are not entirely comparable with earlier years because more centres are included and because of the expansion of the boundaries of metropolitan areas. This is based on information from the 1961 census.

¹Monthly totals are not equivalent to annual data which include Newfoundland and Yukon and Northwest Territories for which only annual statistics are collected. ²Planks and boards, flooring and square timber. ³Hollow blocks including fireproofing and load-bearing tile. ⁴For building insulation only. ⁵Figures cover the production of firms which normally account for 90 per cent of the total for Canada. ⁶Includes concrete chimney blocks, up to December 1959. ⁷Factory sales of firms which normally account for 96% of total Canadian production. Source: Concrete Products (44-002), Products made from Canadian clays (44-005), Asphalt Roofing (45-001), Rigid Insulating Board (36-002), Iron Castings and Cast Iron Pipes and Fittings (41-004), Steel Wire and Specified Wire Products (41-006), Gypsum Products (44-003), Mineral Wool (44-004), Sales of Paints, Varnishes and Lacquers (46-001) and Trade of Canada, Imports (65-007), Exports (65-004), D.B.S.

¹Excluding Newfoundland. Western grain prices used in the construction of the Index prior to August 1, 1962 are final prices.From August 1, 1962 to date, the western grain prices used in the index are initial prices only for wheat, oats and barley. ²Includes subsidy on hogs. ³Based on price for hogs including Dominion premium up to September 1960. A rise in ratio favours production of beef.⁴Previous to January, 1958, quotations referred to steers up to 1,000 lbs. Now they refer to all weights. ¹Overseas clearances plus U.S. imports for domestic use compiled from returns of Canadian elevator licensees and advice from American grain correspondents. Revised to include bagged seed wheat previously excluded. ²Customs exports are adjusted to reflect actual physical movement of wheat and wheat flour from Canada. Data shown for the last three months are not so adjusted. ³Annual data are monthly averages of crop year. ⁴Includes eggs for hatching. ¹Total retail trade obtained by summing "By Kinds of Business". The sum of the seasonally adjusted retail trade by regions will not necessarily add up to this total.

²Includes sales of new and used cars, trucks and buses, repair parts and services, tires and tubes, storage batteries, gasoline, some farm implements and a small amount of wholesale trade.

¹Short term loans outstanding extended mainly but not entirely to consumers and for other non-business purposes, by selected financial institutions. The table does not include loans of trust and loan companies, second mortgage loans on residential real estate and loans of some other financial institutions for which comparable data are not available. ²Conditional sale agreements held in connection with the financing of retail purchases of consumer goods. ³Companies licensed under the Small Loans Act. Cash loans have no conditional sales contract but are usually repaid in instalments. ⁴Excluded from the above tabulation are charge accounts of motor vehicle dealers whose credit is extended mainly to businesses rather than to consumers. Instalment credit includes conditional sales agreements only. ⁵Amount owing to oil companies, excluding commercial accounts. ⁶Includes loans fully secured by marketable bonds and stocks, home improvement loans, etc. Excludes loans to finance purchase of Canada Savings Bonds. ⁷Figures for dates other than year ends are estimated on the basis of the loans by twelve companies. ¹Data in this table refer to railways with annual operating revenues of \$500,000 or over. Monthly averages for 1961 and 1962 differ from the sum of the monthly data due to revisions which cannot be allocated by months. ²Includes January to July interim payments related to recommendations of the Royal Commission on Railway Transportation.

¹Note Circulation of Bank of Canada and chartered banks, excluding notes held by chartered banks.²Subsidiary coin issued by the Mint less coin held by Bank of Canada and chartered banks in Canada.³Less total float, i.e. cheques and other items in transit (net).⁴At September 30, 1957, the deposit balances of religious, educational and welfare institutions used for business purposes, about \$140 million, were reclassified from "personal savings deposits" to "other notice deposits". The figures prior to September 30, 1957 are thus not comparable with those since that date.

Note: This series gives total new settled-for ordinary insurance sales in Canada, exclusive of revivals, increases, dividend additions, reinsurance acquired and pension bonds without insurance. Totals are estimates projected from the sales reported by 32 companies operating in Canada representing 89 per cent of new ordinary insurance sales. ¹The Canada totals by months for 1961 and 1962 do not correspond to the sum of the provincial totals as revisions applied to the national total are not yet available for the provinces. Neither the monthly figures for 1961 and 1962 nor the monthly averages for 1962 have been revised to agree with the Canada total.

Note: — The definition of profits before taxes is based mainly on the accounting definitions used by corporations. However, depletion charges are added back to net profits while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all companies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by a sample of all companies incorporated in Canada (Excluding government-owned companies and incorporated co-operatives).

¹Includes Electric Power, Gas and Water Utilities. ²Includes Tobacco, Leather and Miscellaneous Manufacturing Industries. ³Includes Community, Business and Personal Service Industries. ⁴Includes Agriculture, Forestry, Fishing and Construction.

A NOTE TO USERS

Changes in this Issue:

- (1) The positions and numbering of some of the tables in the section on External Trade have been changed.
- (2) Table 86 on the Canadian Balance of International Payments has been expanded. More detail will now be provided on Canada's current account with all countries and with the United States and the United Kingdom. Also, more detail will be given on Canada's capital account with all countries.

Back Records:

The following back records, raw and seasonally adjusted, are available on request from the Current Business Indicators Section, National Accounts and Balance of Payments Division, D.B.S.

- (1) The series on shipments, new orders, and inventories broken down into raw materials, goods in process and finished products as in Table 37 from 1952 to date.
- (2) The series on building permits by types (Table 58) namely industrial, commercial, institutional and government permits are available from 1948 to date.
- (3) The series on merchandise exports and imports in table 84 for the European Common Market, European Free Trade Association and the O.E.C.D. countries from 1946 to date.
- (4) Employment indexes from 1949 to date for the following series in table 17: industrial composite, forestry, public utilities and finance.
- (5) Labour income by provinces, as in table 12, is available from 1947 to date.
- (6) All retail trade series from 1947 to 1962 as in table 76.

NATIONAL ACCOUNTS, INCOME AND EXPENDITURE

THIRD QUARTER, 1963

Introductory Review

The expansion in production of goods and services continued in the third quarter as a \$564 million increase carried Gross National Product to an annual rate of \$43.0 billion after seasonal adjustment. This rise of 1.3 per cent was a continuation of similar sized gains which have been apparent since early in 1962, and was the tenth consecutive quarterly increase in the current expansion. Since the trough in business activity at the beginning of 1961, Gross National Product has now advanced 19 per cent, about three fourths of which represented a gain in real terms. During the quarter, prices rose by about one half of one per cent, so that they accounted for approximately one third of the increase in the value of Gross National Product.

The latest quarterly gain stemmed mainly from increased spending on consumer goods and services and a moderate accumulation of business inventories. Spending by persons increased by over \$550 million to an annual rate of \$27.4 billion, with about two thirds of this increase attributable to non-durable goods. The current quarter's build-up of non-farm inventories of \$300 million was a renewed element of strength, after nine months during which the rate of inventory accumulation slowed down and finally turned to a modest liquidation.

The other sectors of demand reflected mixed movements, with fixed capital formation rising by 1½ per cent, to \$7.4 billion, mainly as a result of increased investment in machinery and equipment, government demand for goods and services rising by 1 per cent, and exports declining fractionally to an annual rate of \$8.9 billion. Part of the increased demand was met by a 4 per cent rise in imports of goods and services, which reached \$9.7 billion after discounting seasonal influences. As a result of the above external transactions, the net import balance widened to an annual rate of \$0.7 billion from \$0.3 billion in the preceding quarter.

Net National Income rose by just over 1 per cent to \$32.8 billion. The gain resulted mainly from a 1½ per cent increase in labour income, partly reflecting increased employment; this was offset to some extent by lower corporation profits, which edged downward by 2 per cent after three successive quarterly increases. Total employment advanced in step with the 1 per cent growth in the labour force, leaving the ratio of unemployment to total labour force on average during the quarter little changed. However, within the third quarter there were significant month-to-month declines in unemployment.

Percentage Changes in Components of Gross National Expenditure¹

¹ All comparisons except 3 quarters 1962 to 3 quarters 1963 are based on data seasonally adjusted at annual rates.

Gross National Product during the first nine months of the year was running 6 per cent above the same period one year ago, and had advanced $4\frac{1}{4}$ per cent from the end of 1962. With three quarters data available it is now possible to suggest some tentative orders of magnitude for the increase in the year 1963 as a whole. For example, if the increase between the third to fourth quarter is assumed to be 1 per cent after allowance for seasonal influences, the annual change would be almost 6 per cent, whereas no change between the third and final quarter of the year would yield an increase of $5\frac{1}{2}$ per cent.

The main reasons for the higher level in the first nine months of the year when compared with the same period in 1962 have been consumer spending which accounted for one half of the increase. However, other sectors of demand, although quantitatively less important than consumers registered relatively greater gains. Exports of merchandise were particularly strong, investment in machinery and equipment and government expenditure on goods and services were all higher by 6 per cent or more.

Price Movements

As noted in the introductory paragraph, prices overall rose by about one half of one per cent in the third quarter. The price component of personal

expenditure advanced by a little over one half of one per cent, largely due to an over one per cent increase in the prices of food between the second and third quarter after adjustment for seasonal factors. Prices of non-food commodities and services increased only fractionally. The price index of gross fixed capital formation showed an increase of 1.2 per cent compared to 0.4 per cent in the preceding quarter. Most of this change took place in machinery and equipment, and was associated with an increase in the federal sales tax. The new non-residential construction price index increased by 1.0 per cent, while the price index of new residential construction showed a moderate increase of 0.5 per cent. The price index of imported goods and services increased by 1.2 per cent as compared with an increase of 0.4 per cent in the preceding quarter. This is largely the result of change in the prices of imported animal and vegetable products. The export price index showed only a fractional increase.

A comparison between the first nine months of 1962 and the first nine months of 1963, indicates that about two thirds of the 6.0 per cent increase in the value of production represented a gain in real terms. Value, volume and price changes for nine months comparison as well as the second to third quarters comparison, are shown in the accompanying table.

Percent Changes – Current Dollars, Constant Dollars, and Prices

² The base weighted price index of Gross National Expenditure showed a somewhat larger increase in price from the second to third quarter of 1963.

DEVELOPMENTS IN THE THIRD QUARTER

Consumer Expenditure

Personal spending on goods and services rose by 2 per cent, the largest increase since the first quarter of 1962. The pick-up was most pronounced in spending on non-durable goods following a weak second quarter. Purchases of durable goods rose by only 1 per cent as a slight dip in value of net purchases of new and used cars dampened gains in purchases of all other durable goods. About one third of the overall gain is attributable to rising prices, especially among non-durable goods. Consumer buying was particularly strong in Saskatchewan, probably in response to the buoyant level of farm incomes associated with recent record production and sales of grain crops.

The value of food purchases rose by 2 per cent while food prices were estimated to have increased by a little over 1 per cent; gains also occurred in purchases of clothing and gasoline, oil and grease. Small declines were registered in the purchases of tobacco, alcoholic beverages and fuel for home heating. The increase of 1½ per cent in the value of services bought, was in line with the average growth rate for this component during recent years; spending on most types of services increased.

Net personal saving declined in the third quarter from a particularly high second quarter; this was the result not only of the increased rate of spending but also of a slight drop in personal

disposable income due in large part to a decline in net farm income following the unusually high payments to farmers by the Canadian Wheat Board in the second quarter. The ratio of net personal saving to personal disposable income was 8.1 per cent in the third quarter.

Business Fixed Capital Formation

Business fixed capital formation, including residential construction, rose by 1½ per cent from the second to third quarter to reach an annual rate of \$7,376 million after allowance for seasonal factors. This rate of increase reflected a slowing down from that of the previous quarter and some changes in the behaviour of components behind the total. The estimated increase of just over \$100 million came entirely from the strength in business demands for machinery and equipment; new residential construction was virtually unchanged and the value of non-residential construction declined. The proportion of production currently being devoted to business fixed capital formation remained unchanged at 17 per cent as increases in capital spending were matched by the rise in gross national production.

The value of housing put in place rose by ½ per cent to an annual rate of \$1,648 million in the third quarter—a fractional increase which was accounted for by price increases due in part to the imposition of the 4 per cent sales tax on building materials. The volume of housing starts rose in the third quarter by 5 per cent to an annual rate of 144 thousand, while completions declined by almost 8 per cent to an annual rate of 129 thousand. The rate of starts in the third quarter was one of the highest on record.

Business outlays on plant and machinery during the quarter amounted to an annual rate of \$5,728 m., or almost 2 per cent above the second quarter. The increase in the current quarter was entirely due to the expenditures on machinery and equipment which rose 5 per cent to just over \$3,000 million, more than offsetting the 2 per cent decline in the value of non-residential construction to an annual rate of \$2,720 million. The volume decline in the latter was somewhat larger as there were price increases in building materials. Demand for agricultural machinery and equipment continued to be a source of considerable strength in raising the total level of spending on machinery.

Non-farm Business Inventories

A building up of stocks was resumed in the third quarter after the slight liquidation which was experienced in the second quarter. The accumulation of about \$300 million at annual rates occurred at the manufacturers, wholesale and retail trade levels. Such an increase is not unusual at times when imports of goods are increasing as in the third quarter; moreover, there was also an increase during the quarter in loans to business by chartered banks, such loans frequently being an important source of finance for inventory investment. It is noteworthy that despite the current accumulation, the increase

in inventories so far has not played as significant a role in the current expansion of business activity as was experienced in the two previous expansions and the level of stocks would not appear to be unduly high in relation to output.

Change in Non-farm Business Inventories

(Seasonally adjusted at annual rates)

	1963		
	1st Q.	2nd Q.	3rd Q.
	millions of dollars		
Manufacturing	- 44	60	64
Durables	16	4	96
Non-durables	- 60	56	- 32
Wholesale	- 28	- 28	84
Retail	76	- 92	164
Other industries	60	20	- 16
Grand totals	64	- 40	296

In manufacturing, the build-up continued at the same rate as in the previous quarter with accumulation of durable goods more than offsetting a lower level of non-durable stocks. The accumulation appears to have been primarily in the finished goods stage of fabrication.

In wholesale trade, the movement was mixed and resulted in a small liquidation of durable goods, and a sharp accumulation of non-durable goods. The stock-to-sales ratio increased over the previous quarter.

In retail trades, the increase of stocks of dealers of motor vehicles, of farm implements, of food, and of apparel, more than offset the small liquidation which was recorded in most of the remaining trades. This stock accumulation, although strong, did not affect the stock-to-sales ratio which remained unchanged since the last quarter.

Exports and Imports of Goods and Services

The annual rate of the deficit on current account transactions with non-residents widened in the third quarter to \$748 million from \$336 million in the preceding period after discounting seasonal influences. This deterioration occurred largely as a result of the increased value of both imports of merchandise and of services. Merchandise exports declined slightly; receipts for services held at approximately the same level as in the previous quarter. Total payments for imports rose by just under 4 per cent to an annual rate of \$9,672 million while receipts for exports fell fractionally to \$8,924 million. Mainly because of the higher level of imports of goods noted above, the surplus on merchandise trade declined to an annual rate of about \$250 million from close to \$600 million.

Imports of merchandise rose by over 4 per cent to \$6,720 million, while increases in tourist expenditures abroad, in payment for freight and shipping services, and in the outflow of interest and dividends raised total payments for services to an annual rate of \$2,952 million, almost 3 per cent above the preceding quarter.

Merchandise exports declined by nearly 1 per cent in the third quarter after seasonal adjustment

and were valued at an annual rate of \$6,968 million, while receipts for services increased by only one half of one per cent to \$1,956 million, mainly as a result of the increased tourist expenditures of foreigners in Canada. One of the main commodity exports contributing to the overall drop was nickel, the result of a decline to a more normal level from an exceptionally strong second quarter.

Exports and Imports of Merchandise and Services

(Seasonally adjusted at annual rates)

Services	- 1,064	- 1,136	- 848	- 808	- 964	- 956	- 924	- 996

Government Sector

Seasonally adjusted, the annual rate of expenditure on goods and services by all levels of government combined rose from \$8,152 million in the second quarter to \$8,244 million in the third, an increase of slightly over 1 per cent. Federal outlays on defence and non-defence declined by about one per cent and two per cent respectively and these were more than offset by increases in expenditures by the provinces and municipalities.

Subsidies paid by the federal government dropped sharply in the third quarter from an especially high second quarter; the latter reflected the large interim payments to the railway companies. Federal transfers to the provincial and municipal governments declined by nearly 12 per cent from the second quarter as the decrease in grants for technical and vocational training exceeded the increased payments under the Federal-Provincial Fiscal Arrangements Act and the Hospital Insurance and Diagnostic Services Act. Other expenditures of federal government showed little change.

Provincial and municipal transfer payments to persons increased by 6 per cent in the third quarter, mainly because of higher grants to hospitals and for education other than municipal schools.

Total revenues of the combined levels of government show little movement; an increase of about 2 per cent at the federal level being partly

offset by a corresponding drop in provincial-municipal revenues. Within the total, the various revenue components showed conflicting movements; the rise in personal direct taxes and indirect taxes was offset by smaller accruals of corporate income taxes associated with lower profits. The larger indirect tax revenues reflect primarily the higher rate of excise taxes at the federal level.

The deficit in total declined from an annual rate of \$1,000 million in the second quarter to a rate of \$876 million in the third. Reflecting the divergent movements at the different levels of government between total revenues and expenditures, the federal deficit dropped from \$572 million in the second quarter to \$148 million in the third, while that of the provincial and municipal governments rose by \$300 million, seasonally adjusted.

National Income

As noted earlier the annual rate of National Income rose by one third of a billion dollars to \$32.8 billion after adjustment for seasonal factors. This 1 per cent increase reflects advances in labour income partly offset by some slight declines in both profits and accrued net farm income.

Wages, salaries and supplementary labour income rose by 1½ per cent in the third quarter, reflecting in part the higher level of employment,

especially in the trade and service industries. Some small part of the increase was due to retroactive wage payments to federal government employees.

Wage and salary payments in goods-producing industries were about ½ per cent above the second quarter, representing the smallest quarter-to-quarter increase since the current expansion. Gains in primary industries of under 3 per cent were partially offset by lower wage and salary payments in the construction industry. Wages and salaries in manufacturing rose less than 1 per cent.

Total wages and salaries for service-producing industries increased by just over 2 per cent. Finance and service recorded a gain of almost 3 per cent which is not unusually high for this group of industries, while wage and salary payments in trade rose by 2 per cent. The higher level of employment accounted for most of the increase in these industry groups.

Following increases in the first half of the year, profits in the current quarter registered a dip of about 2 per cent. The level, however, remained about 1½ per cent above that of the end of 1962, and the gain of about 35 per cent since the beginning of the current expansion is notable when viewed against the advance in total Gross National Product.

Percentage Changes in Corporation Profits

	2nd Quarter 1963 to 3rd Quarter 1963 (Seasonally adjusted)	3 Quarters 1962 to 3 Quarters 1963 (Unadjusted for seasonal variation)
Mines, quarries and oil wells	2.7	2.8
Manufacturing industries	—	8.3
Food and beverages	2.7	11.1
Rubber products	—	36.4
Textiles	11.1	6.7
Wood products	4.2	11.3
Paper and allied products	10.3	- 7.4
Printing, publishing and allied products	25.0	4.3
Metal products (including transportation equipment)	- 9.9	13.8
Electrical products	- 5.0	20.5
Non-metallic mineral products	- 5.6	6.4
Petroleum and coal products	9.1	8.2
Chemical and chemical products	2.9	8.8
Other manufacturing	- 12.5	8.2
Transportation, storage and communication	- 8.1	18.2
Electric power, gas and water utilities ¹	- 36.8	15.3
Wholesale trade	- 17.9	11.4
Retail trade	11.6	7.3
Finance, insurance and real estate	- 6.3	4.6
Community, business and personal service industries	4.8	- 3.0
Other non-manufacturing	—	3.3
Total all industries	- 2.2	7.0

¹ The decline in profits of this group is partly due to the transfer from the private to the public business sector of the corporations acquired by the Quebec Hydro Electric Commission.

The chief industries in which declining profits were evident were wholesale trade, the utilities, transportation, storage and communication and finance, insurance and real estate. Profits in manufacturing overall showed no change with production holding at the level of the second quarter; declines in metal industries (including transportation equipment), were offset by increased profits in the paper, printing and publishing industries, petroleum and coal, and food and beverage industries.

Production by Industry

Total production at factor cost, measured in quantity or base-year dollar terms and adjusted for seasonal variation, increased by a little over one half of one per cent in the third quarter compared with second quarter levels. This latest increase brings this volume aggregate to a level 12 per cent above its previous cyclical peak, reached in the first quarter of 1960. It also gives a 14 per cent increase from the cyclical low of the first quarter of 1961.

Real product less agriculture also increased by about one half of one per cent. The gain in this aggregate came largely from the 1 per cent increase in the service-producing industries, although the forestry component of the goods-producing group also contributed. Total goods less agriculture showed a decline.

Within the goods-producing industries, most major industry divisions declined slightly, with the exception of the industry mentioned above. Construction declined by 3 per cent, from the output plateau it has more or less maintained since the third quarter of 1961. This brings it to about 7 per cent below its 1958 post-war peak.

The quarterly averages of the monthly Index of Industrial Production¹ which accounts for about one third of total production, showed no change between the second and third quarters of the year. This latest development occurred as an almost 2 per cent decline in mining was offset by a more than 3 per cent gain in electric power and gas utilities. The utilities thus maintained the higher rate of increase established during the first quarter after a slight deceleration in the rate of increase during the latter part of 1961 and 1962. Manufacturing was virtually unchanged in the quarter; this was the first time since early in 1961 that this aggregate failed to show an increase. Non-durable manufacturing was up by 0.2 per cent, while durables declined by 0.3 per cent in the quarter.

¹ As noted in the July and August reports on industrial production (DBS Catalogue No. 61-005), users should be cautious in their interpretation of the seasonally adjusted figures for the summer months this year since they seem to be subject to unusual phenomena. It appears that there may be developing a changing pattern of seasonality in production in the summer months due to the wider extension and concentration of holidays in industry. With a 1.4 per cent increase in September over August there was strength in industrial production at the end of the quarter.

As is to be expected, the fractional gain in total non-durables masked a number of largely offsetting changes in the detail. Gains were recorded in printing and publishing (+1%), paper products (+2%), textiles (+3%), and products of petroleum and coal (+4%). On the other hand, 2 per cent declines occurred in foods and beverages, clothing and leather products, while tobacco products were down by 4 per cent.

Within durables, with the exception of iron and steel (off 2 per cent), and non-metallic mineral products (up 2 per cent), changes were under 1 per cent in the major groups. In transportation equipment, motor vehicles continued to expand, registering a further 3 per cent gain in the quarter. Primary iron and steel was up slightly more than 1 per cent.

The drop in mining was concentrated in metals which fell almost 8 per cent. Each of the major metals declined with the exception of copper, which was up slightly. Non-metals and fuels were up by 6 and 3 per cent respectively.

Within the service-producing industries all major industry divisions showed an increase. The transportation, storage and communication group accounted for approximately one half of the increase in aggregate output. Increases were particularly strong in oil and gas pipeline transport and air transport. Both industries, during the post-war period, have been among the most rapidly expanding in the economy. Air transport showed some signs of slowing down during 1962, but the current quarterly increase follows a higher rate exhibited in the first quarter. Water transport also increased during the third quarter, as did storage, due to a sharp rise in the handling of grain at grain elevators.

Trade, which generally follows an expansionary path roughly similar to those of manufacturing and transportation, increased only marginally during the quarter, as a result of gains in retail trade offsetting losses in wholesale trade. The increase in department store volume constituted the largest single contribution to the gain in retail trade. Very notable was the large increase in the farm implement dealer component, which was paralleled to some extent by an expansion in farm machinery sales at the wholesale level. Since mid-1962 there has been some deceleration in the quarter-to-quarter increases in both retail and wholesale trade.

The remaining service-producing industries continued to make moderate gains. The increase in the public administration and defence industry group was concentrated in the municipal and provincial government components; the federal component showed a decline. Elsewhere both the business and personal service industries reflected gains in the third quarter.

DEVELOPMENTS IN THREE QUARTERS OF 1963

Demand Components

The introductory review noted that Gross National Product for the first three quarters of the year stood 6 per cent higher than for the same period of 1962, and that all components of final demand shared in the growth.

The slightly more than 5 per cent increase in personal spending between the three quarters of 1963 and the same period of 1962 was approximately the same as between 1961 and 1962, and constituted an important element in the continued expansion of

Gross National Product. Of prime importance in the increases were personal outlays for services, with a more than 6 per cent increase, as expenditure on shelter and miscellaneous services rose more sharply than last year. Non-durable goods sold to persons were 4 per cent higher and durables 8 per cent higher than in the first three quarters of 1962. The quarterly increases since the beginning of the year, which amount to $4\frac{1}{2}$ per cent, reflect the greater importance of consumers demand in the current year than in 1962 when the increases amounted to 3 per cent.

Percentage Change in Consumer Expenditure

	Year 1961 to Year 1962	3 Quarters 1962 to 3 Quarters 1963
Food	3.3	4.1
Clothing	3.7	3.6
Other	7.9	4.1
Total non-durable goods	5.1	4.0
Appliances and radios	0.8	2.8
Home furnishings and furniture	4.3	4.4
Autos (new and used)	14.1	11.7
Other	3.0	3.1
Total durable goods	8.0	7.8
Total all goods	5.6	4.7
Total services	4.5	6.3
Total personal expenditure (goods and services)	5.2	5.3

Government expenditures on goods and services were 6 per cent higher than in 1962. The pattern of spending in the first three quarters of this year, seasonally adjusted, registered continuous growth but at a reduced rate from that prevailing in the early months of the year. This pattern is in contrast with the previous year when there was little change in the first quarter followed by a sharp increase in the spring quarter and then a decline after the introduction of government austerity measures.

Business fixed capital formation, although higher by almost 5 per cent than the three quarters of 1962, has not been sufficiently strong to achieve

the increase of about $7\frac{1}{2}$ per cent between 1962-1963 anticipated in the mid-year survey of investment intentions. The main element of strength has been the demand for machinery and equipment which is close to 8 per cent higher than the comparable period of last year. The value of non-residential construction was only 2 per cent higher this year. The quarterly movements for any single component of business fixed capital formation have tended to be erratic, although on balance some overall increase in capital formation has been achieved in each quarter of 1963. This expansion contrasts with 1962 when persistent declines in non-residential construction caused the aggregate to turn down in

the second quarter. The less hesitant movement in 1963 has produced a 4½ per cent rise since the beginning of the year, stronger than the increase in the comparable 1962 period.

During the first nine months of the year the deficit on current account with non-residents narrowed to \$400 million from \$700 million in the same period of the previous year. The improvement resulted mainly from a higher level of merchandise exports, total exports rising by over 8 per cent as against increased imports of only 3 per cent. The pattern emerging in the first three quarters of the year, after discounting seasonal influences, is one of a sizeable but quite volatile surplus on merchandise trade and a deficit on services and non-merchandise items which has remained high, although lower than that in the comparable period of 1962. The differences between the seasonally adjusted quarter-to-quarter movements in total exports and imports in the current year have been quite significant and present a different picture from the year-to-year comparison. After a fractional rise at the beginning of the year, exports jumped sharply in the second quarter and then dropped back slightly in the summer months to give a total rise since the beginning of the year of just under 6 per cent. Imports meanwhile have expanded regularly and with above average quarterly increases for recent years, to register a 9½ per cent climb since the beginning of the year. This rise may in part be due to the removal on April 1, 1963, of the remaining temporary import surcharges.

Government Sector

Comparing the nine months of 1963 with the corresponding period of the previous year, the total deficit of the federal government declined from \$440 million in 1962 to \$299 million in 1963 as increased revenues more than offset the slight increase in expenditures. At the provincial and municipal levels, however, total expenditures rose by 11 per cent while revenues increased by only 8 per cent, enlarging the deficit from \$149 million in the nine months of 1962 to \$328 million in 1963.

Outlays on goods and services by the federal government showed little change between the first three quarters of 1962 and 1963; the expenditures by the provincial and municipal governments, however, show a gain of over 11 per cent, mainly due to increases in salaries, wages and supplementary labour income, larger expenditures on highways and vocational schools.

In the nine-month comparison, other expenditures also showed sharp changes. Federal subsidies rose by 32 per cent as increases in the loss of the Agricultural Stabilization Board and in interim payments to railway companies more than offset declines in assistance for storage costs on grain and in payments under the Freight Rates Reduction Act. There was a 5 per cent increase from the first nine months of 1962 to the nine months of 1963 in federal transfers to the provincial-municipal governments, mainly because of substantial increases in

grants for technical and vocational training and under the Hospital Insurance and Diagnostic Services Act while payments under the taxation agreements, health grants and grants toward the construction of the Trans-Canada Highway were lower.

There was a rise of over 10 per cent in transfer payments to persons by the provincial and municipal governments, including higher grants to hospitals and for education, other than municipal schools, and larger payments for social assistance and old age and blind allowances.

On the revenue side, federal receipts from personal direct taxes for the first nine months of 1963 were nearly 4 per cent higher than in the same period of the previous years. It may be noted that the federal abatement in respect of personal income taxes in favour of the provinces rose from 16 per cent in 1962 to 17 per cent in 1963. At the provincial and municipal level the increase amounted to 14 per cent, partly reflecting the higher abatement and increased revenues from hospital insurance premiums and motor vehicle licences and permits.

Indirect taxes revenues of provincial and municipal governments combined rose by 9 per cent between the two nine-month periods attributable to larger returns from gasoline and sales taxes and increases in real property tax revenue.

National Income

The Net National Income generated by increased production was 7 per cent higher in the first three quarters of 1963 than in the similar period of 1962, with increases occurring in each quarter of the current year. The increase is mainly attributable to higher wages, salaries and supplementary labour income, although farm income, corporation profits, and investment income were all significantly higher.

Labour income, which was 6½ per cent higher in the first nine months of 1963 than the previous year, has also experienced sharper quarterly gains since the beginning of this year than in 1962, with above average increases in both the first and third quarters. Gains so far this year amount to 6 per cent, about 1 per cent greater than increases in 1962. With record crop production in 1963, the relative gain in accrued farm income has been particularly sharp in an over-the-year comparison.

Corporation profits which experienced such rapid growth in the early stage of the current expansion showed an overall increase, the three quarters of 1963 being 7 per cent above the comparable 1962 period. During the current year the advance of 1½ per cent in the seasonally adjusted data is a repetition of the hesitancy which marked the opening quarters of 1962.

Accrued net income of farm operators from farm production increased sharply in 1963 compared with the same period in 1962, with much of the increase

attributable to the value of the 1963 crop, 16 per cent higher than the 1962 crop. Cash receipts from the sale of farm products also increased, with particularly sharp increases in the income from the sale of wheat, oats, and barley. Production of livestock showed little change during the period.

Production by Industry

A comparison of the seasonally unadjusted data for the first nine months of 1963 with the corresponding data for 1962 reveals a more than 4 per cent increase in real product. This increase is reduced slightly by the exclusion of agriculture.

Among the goods-producing industries, manufacturing increased by almost 5 per cent, with the durables component showing the largest gains (6 per cent). Most of the strength here continued to come from the strong expansion in motor vehicle output, along with such other industries as iron and steel products, electrical apparatus and supplies

and wood products. There was a fractional decline in construction and a slowdown in the rate of increase in mining as a result of a decline in metal mining which tended to offset large increases in natural gas and fuel mining. The service-producing industries increased by about 4 per cent. Electric power and gas utilities showed the highest increase, 7 per cent. This is about the same as the rate of increase maintained over the past two years. Higher than average output increases continued to be made in the cyclically sensitive transportation, storage and communication group, while trade increased less rapidly (3 per cent). The largest decline from earlier rates of expansion of any one service group occurred in public administration and defence, which showed a 1 per cent increase over 1962. The remaining service-producing industries continued to expand in line with their long-term trends.²

² See DBS Reference Paper, *Indexes of Real Domestic Product by Industry of Origin* (Catalogue No. 61-505), for an analysis of these trends.

INDUSTRIAL PRODUCTION (More detail in Table 11)

The index of industrial production gained a further 1.2 per cent in October, as both manufacturing and electric power and gas utilities showed good strength. Mining was virtually unchanged.

¹Gross National Product at market prices excluding accrued net income of farm operators from farm production. ²Before dividends paid to non-residents; see also footnotes on Table 99. ³Original data as in column 8, Table 80. ⁴Data for total housing starts and completions are not affected by the area changes mentioned in footnote 1, page S-5.

PRICES (More detail in Tables 28, 30, 31, 84, 85 and 100)

The general wholesale index and the index of thirty industrial materials increased in November.
The consumer price index rose fractionally in November as a result of small increases in the main component indexes.

		wholesale	thirty	export prices	import prices	industrial common stocks	consumer price index (1949=100)				
		general index	industrial materials				total	food	non durables		services
		1935-39=100		1948=100		1956=100			ex food	durables

¹Prior to the census in 1961, population estimates were made quarterly on March 1, June 1, September 1 and December 1, and in addition on July 1 and January 1 of each year. After the 1961 census the quarterly estimates will be made on January 1, April 1, July 1 and October 1, as well as June 1. ¹Includes change in farm inventories. The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for withdrawals of grain from farm stocks and the change in livestock items. Because of arbitrary elements, too precise an interpretation should not be given to the series. ²Includes residual error of estimate. Source at bottom of Table 10A.

¹The data in Tables 17 to 26 are based on reports from employers usually employing 15 persons and over and covering the respondents' last pay period(s) in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. ²Excludes agriculture, fishing, trapping and domestic service. ³Includes storage and communication. ⁴Includes insurance and real estate. ⁵Excludes public administration and defence and such community services as health and education. Source: Employment and Payrolls, (72-002), D.B.S.

¹Monthly shipments represent an estimated projection of the latest available census of manufacturer's values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. ²Total inventories owned by manufacturers including warehouse stocks. Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D.B.S.

Table 34: shipments in manufacturing¹, by economic use groups (million dollars)

¹Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. ²Total manufacturing inventory owned by manufacturers including warehouse stocks. ³Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. ⁴End of period. Annual figures for inventories and unfilled orders are end of December values.

¹Data on shipments relate to rolling mills products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. ²Excluding shipments for re-processing at maker's own plants. ³Imports include, in addition to all other shapes, ingots, cast iron pipe, wire and wire ropes. Imports exclude castings (except cast iron pipe), forgings, fittings and couplings. Source: Primary Iron and Steel (41-001), D.B.S.

¹Data refers to city proper for Port Arthur, Fort William, Regina and Saskatoon; in other cases to metropolitan area. ²The data on building permits are collected for 1,100 municipalities and individual figures are available on request. Some of the annual totals for 1961 and 1962 differ slightly from the sum of the twelve monthly totals, due to the addition of statistics received too late to be included in the monthly data. Source: Building Permits (64-001), D.B.S.

¹The coverage was extended to 507 municipalities in 1948, and as of 1961, stands at 1,100, minor revision still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation. Source: Building Permits (64-001), D.B.S.

¹A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All Metropolitan Areas and Urban Centres with a population of 5,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. ²End of period. Source: New Residential Construction (64-002), D.B.S.

¹Footnote and Source are at Bottom of Table 63. ²Starting in January 1962, the data are not entirely comparable with earlier years because more centres are included and because of the expansion of the boundaries of metropolitan areas. This is based on information from the 1961 census.

*See also Table 31. ¹Excluding Newfoundland. Western grain prices used in the construction of the index prior to August 1, 1962 are final prices. From August 1, 1962 to date, the western grain prices used in the index are initial prices only for wheat, oats and barley. ²Includes subsidy on hogs. ³Based on price for hogs including Dominion premium up to September 1960. A rise in ratio favours production of beef. ⁴Previous to January, 1958, quotations referred to steers up to 1,000 lbs. Now they refer to all weights. Source: Coarse Grains Quarterly (22-001), Stocks of Meat and Lard (32-012), Index Numbers of Farm Prices of Agricultural Products (62-004), Livestock and Meat Trade Report, Dept. of Agriculture, D.B.S.

¹Overseas clearances plus U.S. imports for domestic use compiled from returns of Canadian elevator licensees and advice from American grain correspondents. Revised to include bagged seed wheat previously excluded. ²Customs exports are adjusted to reflect actual physical movement of wheat and wheat flour from Canada. Data shown for the last three months are not so adjusted. ³Annual data are monthly averages of crop year. ⁴Includes eggs for hatching. Source: Coarse Grains Quarterly (22-001), Wheat Review (22-005), and Trade of Canada, Exports (65-004), D.B.S.

¹Total retail trade obtained by summing "By Kinds of Business". The sum of the seasonally adjusted retail trade by regions will not necessarily add up to this total. ²Includes sales of new and used cars, trucks and buses, repair parts and services, tires and tubes, storage batteries, gasoline, some farm implements and a small amount of wholesale trade.

¹Short term loans outstanding extended mainly but not entirely to consumers and for other non-business purposes, by selected financial institutions. The table does not include loans of trust and loan companies, second mortgage loans on residential real estate and loans of some other financial institutions for which comparable data are not available. ²Conditional sale agreements held in connection with the financing of retail purchases of consumer goods. ³Companies licensed under the Small Loans Act. Cash loans have no conditional sales contract but are usually repaid in instalments. ⁴Excluded from the above tabulation are charge accounts of motor vehicle dealers whose credit is extended mainly to businesses rather than to consumers. Instalment credit includes conditional sales agreements only. ⁵Amount owing to oil companies, excluding commercial accounts. ⁶Includes loans fully secured by marketable bonds and stocks, home improvement loans, etc. Excludes loans to finance purchase of Canada Savings Bonds. ⁷Figures for dates other than year ends are estimated on the basis of the loans by twelve companies. Source: Department of Finance, Department of Agriculture, Bank of Canada, Credit Statistics (61-004), D.B.S.

¹The trade figures have been adjusted to reflect more closely the timing of transactions, and to exclude commodities which are covered elsewhere or are not pertinent for balance of payments purposes. ²Net resources supplied to or by the International Monetary Fund and other special financial assistance. ³Annual data for long-term forms include +28 million in 1959, whose quarterly distribution is not known. Quarterly data include this amount as short-term forms. Sources: Annual and Quarterly Estimates of the Canadian Balance of International Payments (67-201 and 67-001), D.B.S.

¹Data in this table refer to railways with annual operating revenues of \$500,000 or over. Monthly averages for 1961 and 1962 differ from the sum of the monthly data due to revisions which cannot be allocated by months. ²Includes January to July interim payments related to recommendations of the Royal Commission on Railway Transportation. ¹Revised series with coverage limited to business failures under the Bankruptcy and Winding Up Acts, excluding individuals not operating businesses as such. ²In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements made under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available. Source: Commercial Failures (61-002), D.B.S.

¹Note Circulation of Bank of Canada and chartered banks, excluding notes held by chartered banks.

²Subsidiary coin issued by the Mint less coin held by Bank of Canada and chartered banks in Canada.

³Less total float, i.e. cheques and other items in transit (net).

⁴At September 30, 1957, the deposit balances of religious, educational and welfare institutions used for business purposes, about \$140 million, were reclassified from "personal savings deposits" to "other notice deposits". The figures prior to September 30, 1957 are thus not comparable with those since that date.

Note: This series gives total new settled-for ordinary insurance sales in Canada, exclusive of revivals, increases, dividend additions, reinsurance acquired and pension bonds without insurance. Totals are estimates projected from the sales reported by 33 companies operating in Canada representing 84 per cent of new ordinary insurance sales. ¹The Canada totals by months for 1961 and 1962 do not correspond to the sum of the provincial totals as revisions applied to the national total are not yet available for the provinces. Neither the monthly figures for 1961 and 1962 nor the monthly averages for 1962 have been revised to agree with the Canada total. Source: Monthly Survey of Life Insurance Sales in Canada, Life Insurance Agency Management Association, Hartford, Conn.

Note: — The definition of profits before taxes is based mainly on the accounting definitions used by corporations. However, depletion charges are added back to net profits while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all companies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by a sample of all companies incorporated in Canada (Excluding government-owned companies). ¹Includes Tobacco products, Leather and Miscellaneous Manufacturing industries. ²Includes Electric Power, Gas and Water Utilities. ³Includes Community, Business and Personal Service Industries. ⁴Includes Agriculture, Forestry, Fishing and Construction. Source: Corporation Profits (61-003), D.B.S.

THE HISTORY OF THE
CITY OF BOSTON

The city of Boston, situated on a neck of land between the harbor and the bay, has been the seat of government since the first settlement. It was founded in 1630 by a group of Puritan settlers, and has since that time been a center of political and commercial activity. The city has grown steadily, and its population has increased from a few hundred in 1630 to over a million in the present day. The city is known for its many historical landmarks, including the Freedom Trail, the Old State House, and the Paul Revere House. It is also known for its many cultural institutions, including the Boston Symphony Orchestra, the Boston Museum of Science, and the Boston Public Library. The city is a major center of commerce and industry, and is one of the most important cities in the United States.
